Make.

Site Lifecycle Management for SharePoint and Office 365

Portiva.

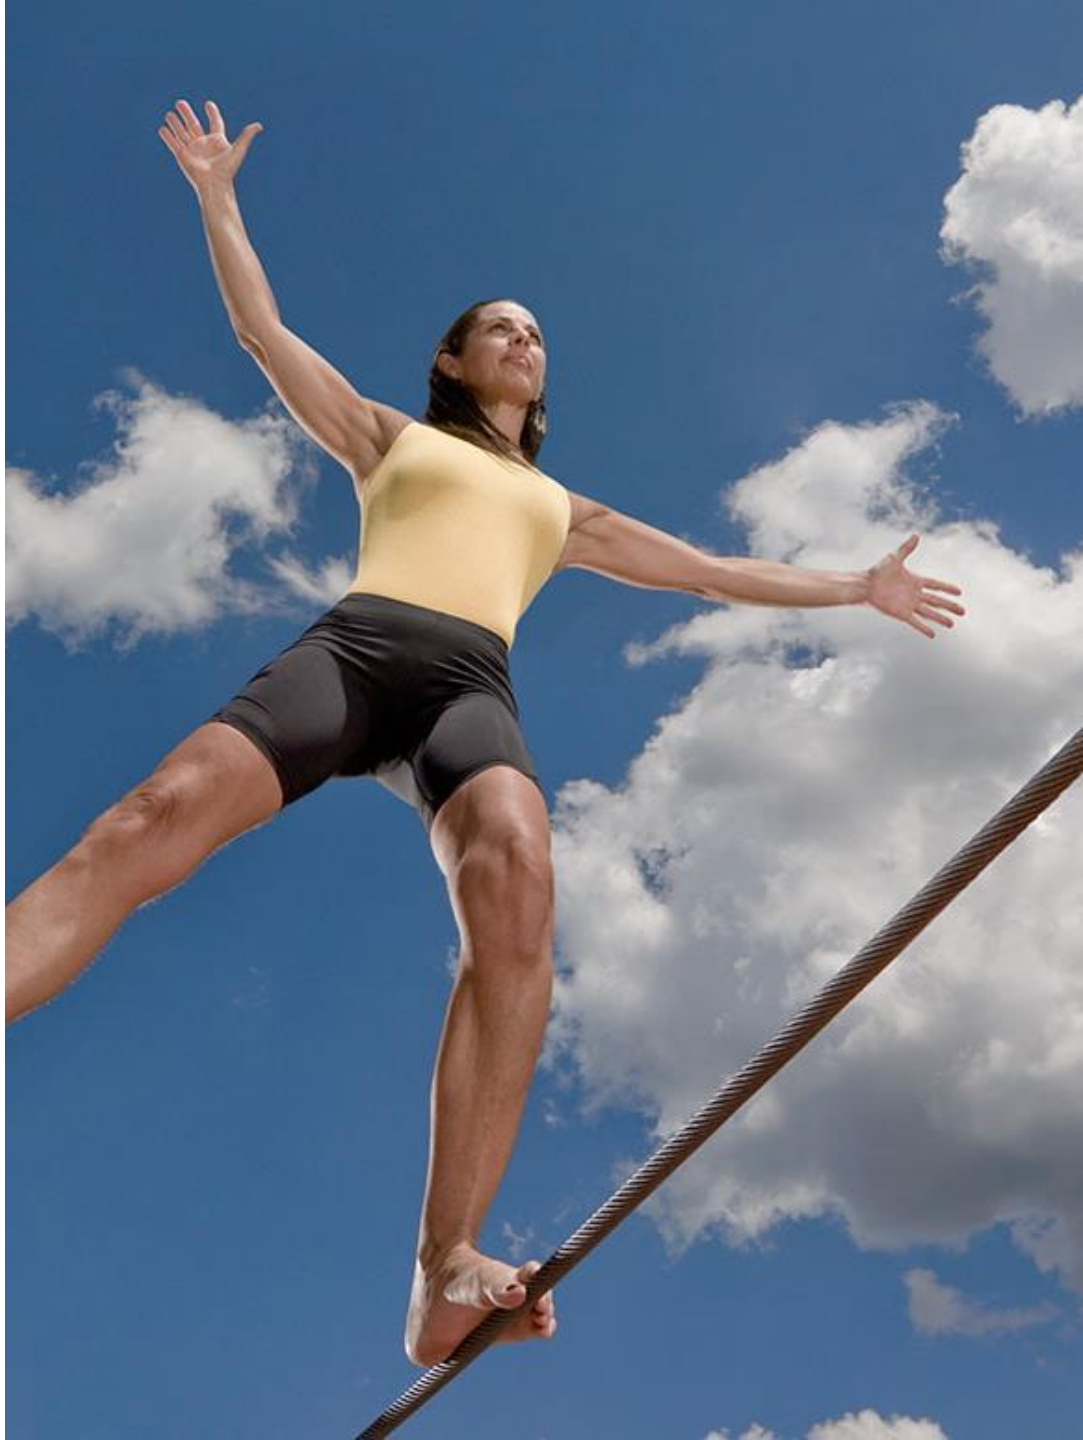
The challenge.

Balance between user-friendliness and governance is a challenge

It becomes easier for end users to create Groups and Teams in Office 365

Controlling the flow and structure becomes more complex and less manageable

Rules and regulations require control around privacy and data control becomes a complicating factor



SharePoint.

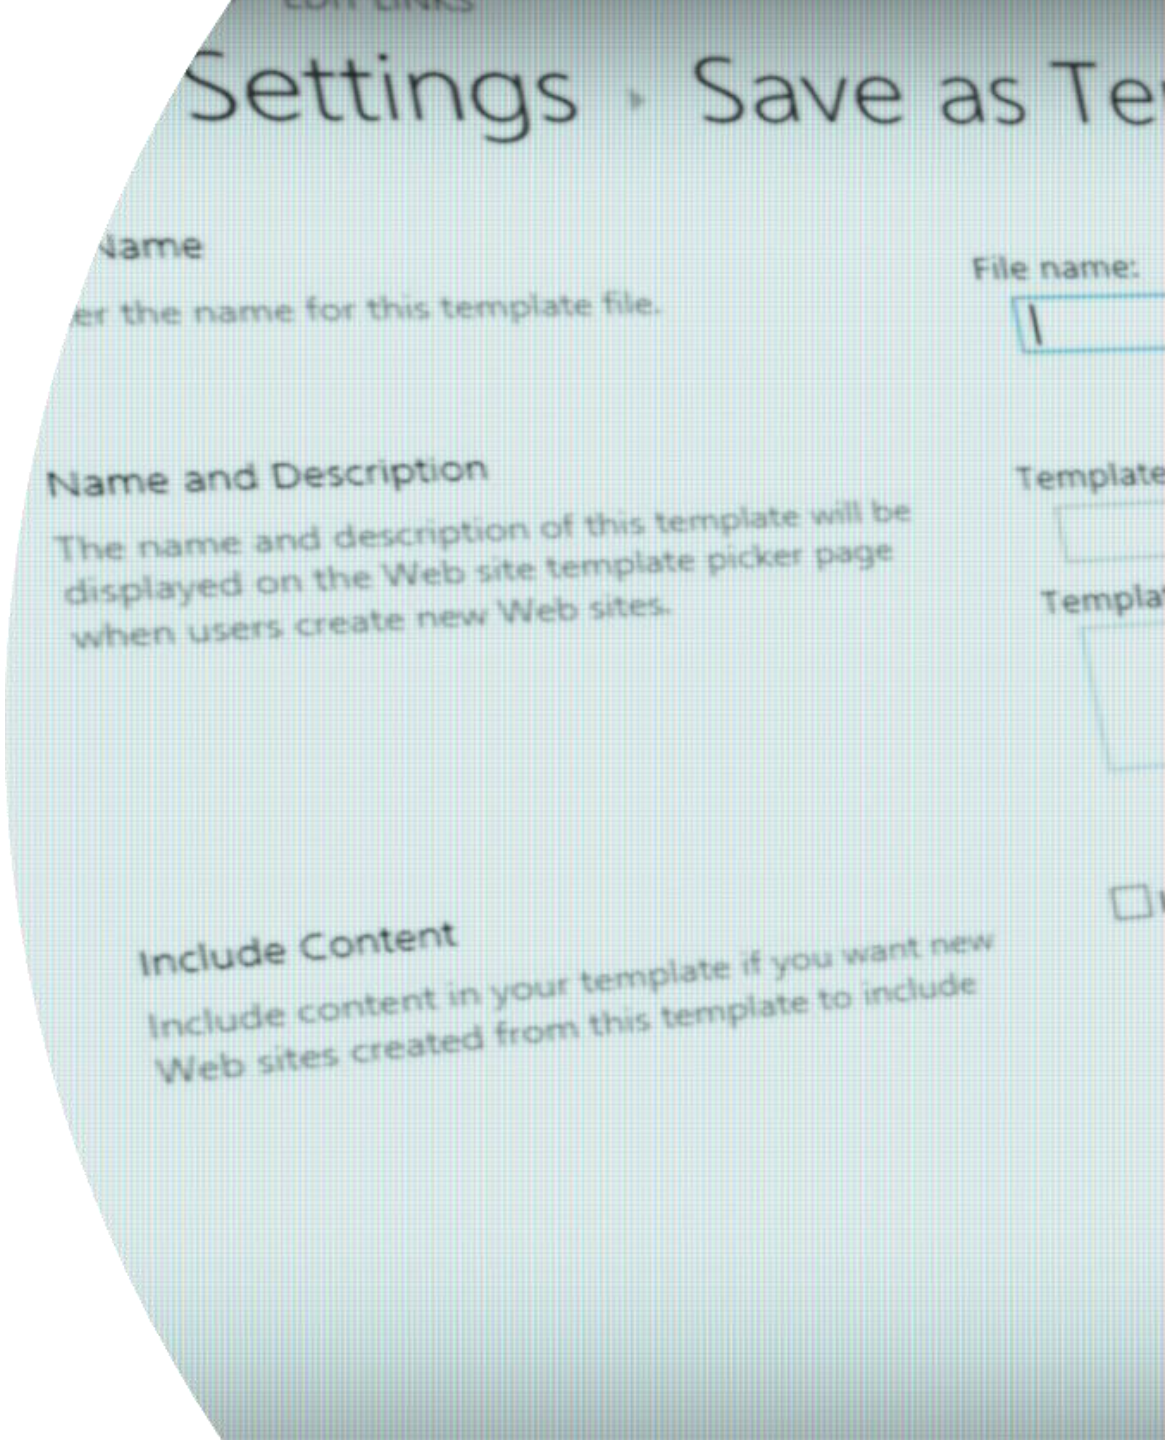
Does not provide sufficient support for:

Central management of Site and Teams templates

Repeatable and automated deployment of Site and Teams configurations

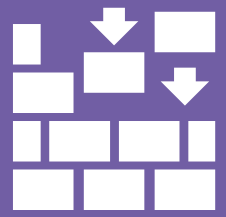
An easy way to apply changes and updates on multiple existing Sites and Teams

Control on site lifecycle management of groups and teams



Make.

Provides support for various issues



Create new sites and Teams based on templates

Apply changes to existing sites and Teams

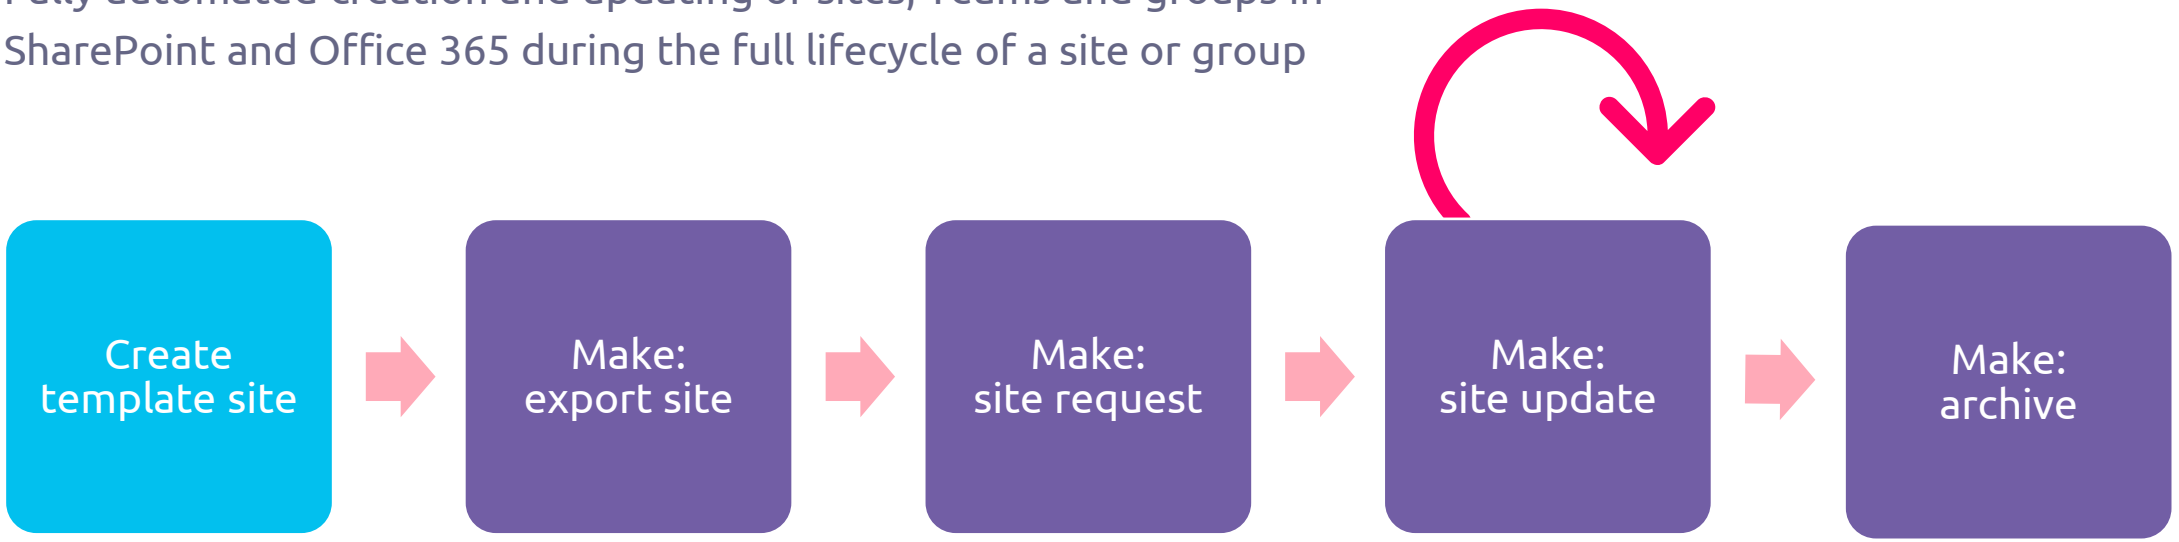
Structured and repeatable deployment on D, T, A and P environment

Deployment mechanism for hybrid scenarios

Make.

Site lifecycle management

Fully automated creation and updating of sites, Teams and groups in SharePoint and Office 365 during the full lifecycle of a site or group



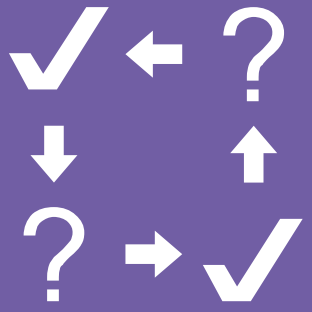
Make.

Supports three ways to create or update a site configuration

1

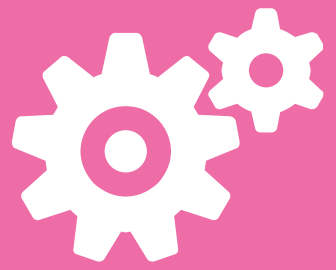
Via the Make Admin Center by a system administrator

2



Requested by employee via a list in SharePoint with (work)flow action to Make

3



API integration with LOB applications like CRM or ERP

Make.

Why it is a ‘must have’

- Consistency
- Governance
- Integration
- PnP + Make engine

Make.

Demo time
