SharePoint Documents and Lists in Confluence

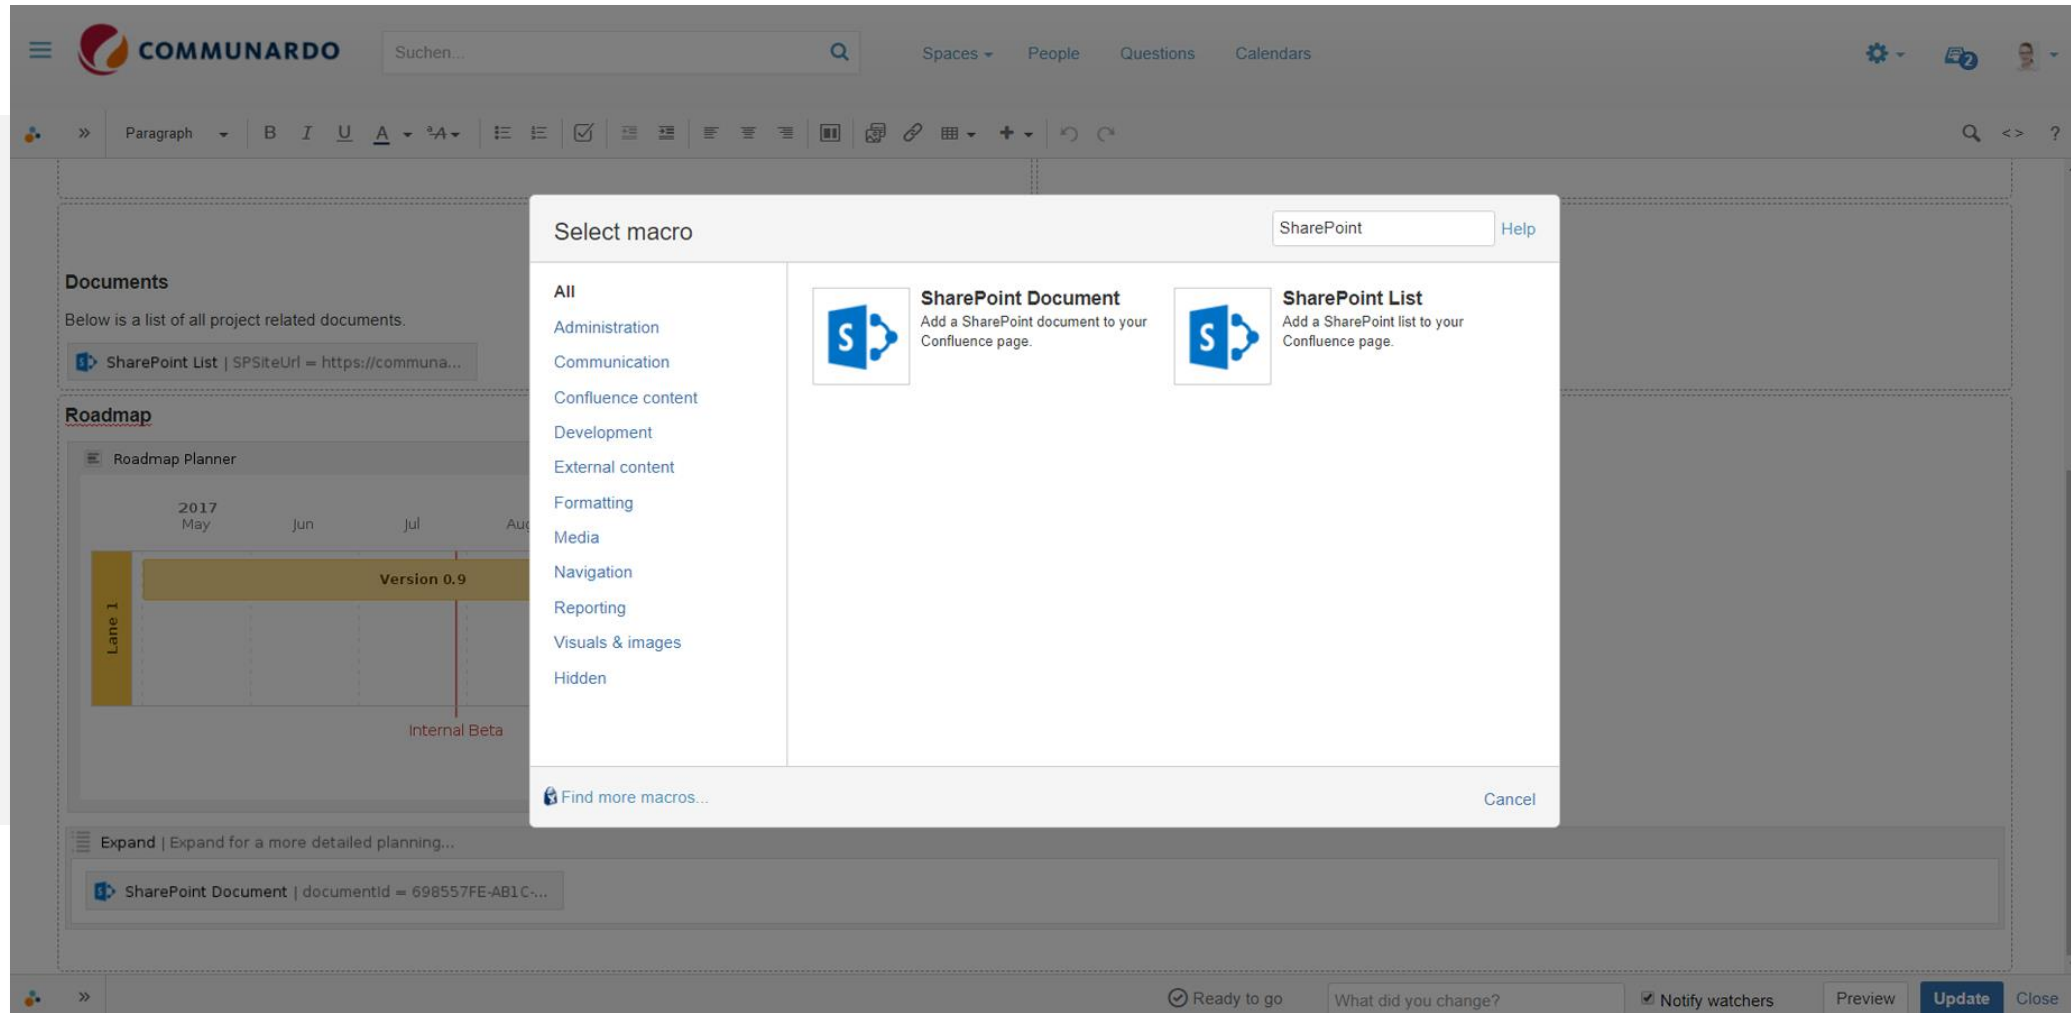

The screenshot displays the Confluence user interface. On the left, a sidebar shows navigation options. The main content area is titled "SharePoint Online Connector for Confluence" and contains a "SharePoint List". A callout bubble points to the "Modified" column header with the text "Embed your desired SharePoint List as a table".

Below the list title, the breadcrumb path is "Marketing (modern teamsite) > ... > Confluence". The list itself has columns for "Name", "Modified", and "Modified By". It contains several items, including folders like "Metadata for Confluence" and "SubSpace Navigation for Confluence", and files like "All_Logos_Of_Our_Products.png", "Hot Product Ideas.txt", "Measures And Notes.docx", "Our Customers.png", "Productoverview_2016.xlsx", and "Productoverview_2017.xlsx".

On the right side of the interface, there is a "SharePoint Document Full" view. It shows a preview of a document titled "SharePoint Online Connector". A callout bubble points to the document preview with the text "Embed Documents as a link or preview". Below this, there is a "SharePoint Document Link" section showing a link to "SharePoint Online Connector for Confluence.pdf".

Add the Macro

SharePoint Document or SharePoint List

Embed a SharePoint Document in Confluence

The screenshot shows the 'Add a SharePoint Online Document' dialog box in Confluence. The dialog is titled 'Add a SharePoint Online Document' and has a close button (X) in the top right corner. It is configured with 'Nintex for SharePoint 2016 Brochure.pdf'.

Annotations with arrows point to specific parts of the dialog:

- A circular callout on the left says 'Sort your results according to the columns of the table' with an arrow pointing to the 'Name' column header in the table.
- A circular callout on the right says 'Use all available filters to find your desired SharePoint document' with an arrow pointing to the 'More Filters' link.
- A circular callout at the bottom left says 'Decide how the document should be displayed' with an arrow pointing to the 'Display Options' section.

The dialog contains the following sections:

- Configured:** Nintex for SharePoint 2016 Brochure.pdf
- Document Name:** Search for documents by name (with a search icon)
- Site Name:** Your SharePoint Site (with a dropdown arrow and a 'More Filters' link)
- Type:** Word x, Excel x, PowerPoint x, PDF x (with checkboxes)
- Author:** Select an Author (with a dropdown arrow)
- Last Modified:** Any date (with a dropdown arrow)
- Created:** Any date (with a dropdown arrow)
- Table:** A table with columns: Name, Site, Last Modified By, and Modified. It lists several documents, including 'The 5 Best Products of Comm...', 'Azure SQL Datenbanken.pptx', 'Launchwebinar SharePoint On...', 'Results of discussion about th...', 'SharePoint+Framework+(SPFx...', and 'Productsoverview_2016.xlsx'.
- Display Options:** A section with two radio buttons: 'Link' (Display the document as a link with additional information.) and 'Full View' (Display the full document immediately.). The 'Full View' option is selected.
- Buttons:** 'Replace' and 'Cancel' buttons at the bottom right.

At the bottom of the Confluence page, there is a 'What did you change?' field, a 'Notify watchers' checkbox, and 'Preview', 'Save', and 'Close' buttons.

Have your Confluence Wiki Pages in SharePoint

The screenshot shows a SharePoint site interface. At the top, there's a navigation bar with 'Office 365' and 'SharePoint' tabs, the 'COMMUNARDO' logo, and a user profile for 'Petrus Abaelardus'. Below this is a search bar and a '+ New' button. The left sidebar contains a 'Home' link and a list of site contents: Conversations, Documents, Notebook, Pages, Site contents, and Recycle bin. The main content area is titled 'SharePoint Connector for Confluence Home' and includes a green banner that says 'Use all the functions! You are able to see macros, write comments and use dialogs on this page.' Below this, a section titled 'SharePoint Connector Features' lists five bullet points: collaborating in the cloud, adding document management capabilities, never getting stuck in details, easily embedding wiki pages and blog articles, and keeping content up-to-date with bidirectional synchronization. To the right of the text is a screenshot of the 'SharePoint Online Connector for Confluence' application interface. Below the features list, there's a 'Recent space activity' section showing a post by 'Petrus Abaelardus' about the connector, updated 2 minutes ago. A 'Space contributors' section lists 'Petrus Abaelardus (2 minutes ago)'. At the bottom, there's a comment section with a 'Write a comment...' input field. Three callout boxes with arrows point to specific features: one points to the green banner, another points to the application screenshot, and a third points to the comment section.

SharePoint Connector for Confluence Home

Created by Petrus Abaelardus, last modified 2 minutes ago

Use all the functions!
You are able to see macros, write comments and use dialogs on this page.

SharePoint Connector Features

- ✓ Start collaborating in the cloud: This popular app is compatible with Microsoft Office 365 and SharePoint Online
- ✓ Add robust document management capabilities to Confluence: Instantly embed, share and edit SharePoint documents in your wiki
- ✓ Never get stuck in the details: Simply embed a List or Document Library from SharePoint Online and browse the files from within a Confluence page
- ✓ Easily embed wiki pages and blog articles in SharePoint: It just takes a couple of clicks to add Confluence content into SharePoint
- ✓ Keep it all up-to-date: Bidirectional synchronization ensures that documents and content on both platforms are always in sync

How to embed a document from SharePoint Online in a Confluence page

Created by Petrus Abaelardus a minute ago

In the first section of this Blog series I will walk you through one of the most requested features of our app SharePoint Online Connector for Confluence: displaying documents from SharePoint Online within a Confluence page or blog post! So why would one have the need to embed for that at all? Read on to find out!

Customers often tell us that Confluence is awesome for **team collaboration** but only so-so for document management (even though attachments are versioned and so on). In turn, while SharePoint offers some sort of wiki most customers only use it as better "file drive" and primarily want to benefit from all the **document management capabilities** it provides. This often leads to a situation where the gap in the integration of the two systems forms some sort of **digital divide**. But – to say it with the words of Apple Inc. – **there's an app for that!**

Now let's have a look how that would handle in real life.

The new digital divide: How competing collaboration platforms are slowing innovation
a minute ago
Team collaboration is often based on different platforms, which makes it hard to build a strong knowledge base for everyone in the company. Read on to get more information on breaking this cycle.

How to embed a list or document library from SharePoint Online in a Confluence page
2 days ago
In this second section of our blog series I will walk you through another highly requested features of our app SharePoint Online Connector for Confluence: displaying List and especially Document Libraries from SharePoint Online within a Confluence page or even blog post! So why would one have the need to embed for that

How to embed a page or blog from Confluence into SharePoint Online
3 days ago
The (for now) final section of this blog series will cover another top feature of our app SharePoint Online Connector for Confluence: displaying content (blogs, single blog post or of course pages) from Confluence in SharePoint Online! So why would one have the need to embed for that at all? We'll find out soon!
