AXIO

Intelligent Automation for Implementation and Management

Dynamics 365 Finance and Operations

AXIO is a revolution in implementation and solution management for Dynamics 365 Finance and Operations. Building on the automation capabilities of Microsoft Lifecyle Services (LCS), AXIO can reduce total cost of ownership by 50% or more by virtually eliminating custom code in core financials and the resulting manual processes that inflate the cost and complexity of implementation and feature updates.

AXIO is based on a library of Process Model Packages - pre-developed, best-practice deployments of business processes in Lifecyle Services. Packages are managed, fully configurable and designed to automatically transition with feature updates. Each includes a Business Process Model with associated Data Package, Regression Test Case and Learning Path Content. AXIO includes over 350 Process Model Packages covering all core financial functions.

AXIO technology enables implementations that are fundamentally different than traditional ERP projects because we start with a functioning financial system and leverage agile development principals to rapidly tailor your solution. Feature updates are accelerated through automated management of the Process Model Packages.

Business Value

Streamlined Implementation
- Significantly Reduced Investment
- Rapid Implementation
- Minimized Risks

Simplified Solution Management
- Significantly Lower Costs
- Accelerated Feature Updates
- Integrated Support

Superior User Experience
- Reduced Training Time
- Enhanced Usability
- Exclusive Capabilities
