

NO-CODE TEST AUTOMATION

Good for quality.

Good for business.

Built for Life Science.

It's a challenge for Life Science companies to maintain the validated state of cloud systems. Each update requires extensive regression analysis. Changed procedures and processes must be documented to ensure inspection readiness. And that's just the tip of the iceberg.

Meet Automated Boost: no-code test automation designed to live up to the heavily regulated demands of the Life Science industry. Stay in control of Dynamics 365, Office 365, SharePoint, Veeva, TraceLink, and many others.

Benefits of Automated Boost

IMPROVE QUALITY

Faster and more frequent execution finds more defects, earlier. And the results are always precise - not subject to human failure.

INCREASE AGILITY

REDUCE TIME AND COST

Run unattended tests in more situations. For example, complete regression on every system update. You only evaluate the exceptions.

BROADEN TEST SCOPE

STAY IN CONTROL
