

Sell-IT: Integrating e-commerce sales channel with ERP

Sell-IT was built for companies that already use Business Central or NAV and want to simplify the management of their online store or create a brand new e-commerce portal.

Sell-IT integrates seamlessly with your ERP, allowing you to manage all of your products, prices and stocks from one place.

Furthermore, as a cloud-based SaaS application, Sell-IT can help reduce your infrastructure costs while facilitating scalability and mobility at the same time.

Why customers use Sell-IT

- **Simplify your online store's management**
- **Automate the sales process**
- **Increase revenues**

ERP Integration

- Seamless integration with built-in capabilities.
- Manage everything directly from Dynamics platform.
- No complex configurations or infrastructure needs.

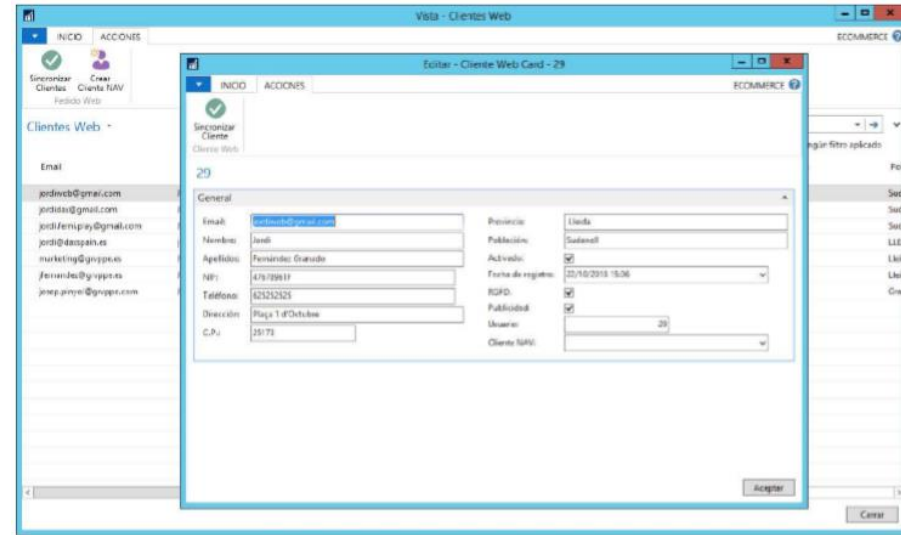

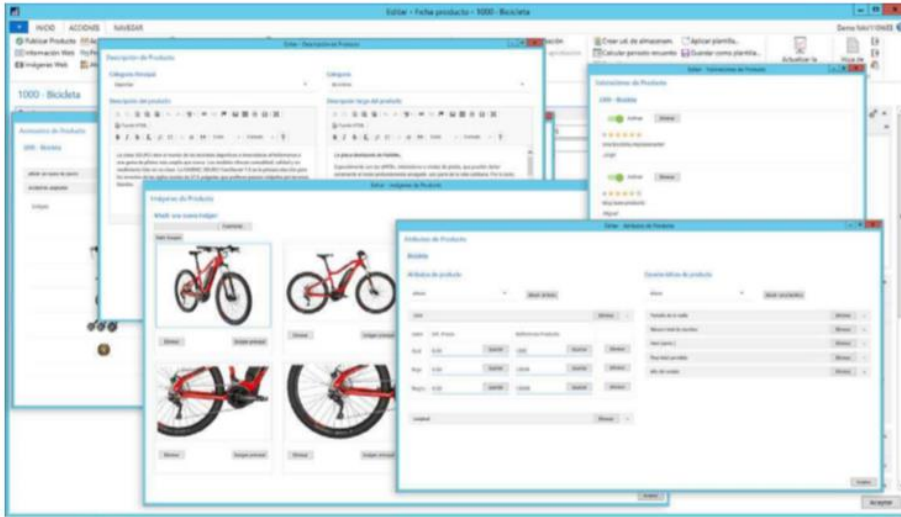

Payment and Security

- Cloud-based security and flexible payment gateways enablement.
- Works with many payment gateways in the market.
- Uses SSL encryption to ensure the site is safe.

End-user Experience

- Deliver a user-friendly and intuitive web store.
- Responsive design adapts to any device with no extra configurations.
- Fast, simple and easy to navigate.

Sell-IT is a web service that works as an online store managed by an ERP through Azure

Sell-IT solution

Connecting an e-commerce ERP solution can be a nightmare when you need to deal with data orchestration frameworks and integrations patterns. It is also an expensive and time-consuming process.

Ideal solution

- One single point to manage all your products, price, stock and shipment details—with no development needs.
- Complete SaaS solution that helps lower your TCO and enables a fast start.
- Same ERP experience for the staff.
