# Complying with Russian federal law #242 to secure personal data inside the Russia

Secure Dynamics 365 personal data in Russian cloud for complying with Russian federal law #242. Easy to setup and use solution with no constraints and performance issues. Fits for multinational enterprises with legal entities in Russia.

## CHALLENGES

Russian Federal law, effective Sep 2015, states: Customer must ensure that «collection, recording, systemization, accumulation, storage, correction (updating and changing) and extraction» of that personal data takes place in databases located in Russia before that data can be transferred outside of Russia.

## IDEAL SOLUTION

Seamless and user-transparent solution for Dynamics 365 F&O that use Russia-based data center to store personal data as first-time storage just before saving the same in the Azure

## DESIRED OUTCOMES

Flexible and easy to setup solution what could fit to any Dynamics 365 F&O customer

# Dynamics Services

## Personal Data Protection for Russia

Make sure that your cloud based ERP complies with tricky Russian federal law #242 and you keep your personal data secured

### ENGINE

Solution uses Dynamics 365 F&O core framework to track the changes in the personal data

### PERSONAL DATA SETUP

Any static data entity (table/field) could be selected as consisting the personal data.

### TELEMETRY

To monitor the solution performance Azure Telemetry service could be deployed and used.

# Customer success: Volgagas

*“Personal data protection solution from Dynamics Services allowed us to store personal data about our employees and other contact information in the Russian cloud. This solution is easy to use and really fits our needs ...”*

– Olga Gavva, ERP Manager, Volgagas

## EASY TO DEPLOY AND USE

Customer signs direct contract with Russian data center to order the cloud based storage that will keep personal data.

Confirms the customer intention to solve the topic and used in collaboration with Russian authorities

## UNIVERSAL

Any Dynamics 365 F&O customer could track any static data that consist of personal data.

Every customer should develop own policies and decide what the «personal data» is. After that, map this policy to database table and fields inside the ERP.

## PERFORMANCE

The solution uses Azure Telemetry to monitor the performance and how it affects the ERP experience.

The customer allowed to choose different modes of the solution operation.

# Secure your Dynamics 365 F&O personal data today!
