2.	Dimension Management Setup	4

1. INTRODUCTION

Dimension Manager gives you the ability to navigate through any posted document or transaction, and to add, change, or delete dimensions on documents and all related entries created when the document was originally posted. This saves you the long, tedious process of reversing out, recreating, and reposting the document.

We also understand that this power can be dangerous, so access to these functions can be tightly controlled by permissions security and posting date range. You'll have a complete audit trail of who changed what and when, and there's even an undo function to get you right back to where you started.

Have you ever had a great idea for a dimension and wanted to report on your historical data for that dimension? Now you can set up new dimensions on a customer, for example, and automatically update all the historical entries and transactions from that customer, instantly enabling you to run reports on that dimension.

Works with all Microsoft Dynamics NAV (Navision) dimension types-global and extended (shortcut).

Large budgets can be time-consuming to update. Dimension Manager will allow users to batch change Dimensions in budgets.

FEATURES

- Add or change dimensions without having to reverse out and recreate documents and transactions.
- Have the freedom and flexibility to create and assign new dimensions to customers, items and vendors.
- Report on historical data by updating dimensions.

HIGHLIGHTS

- Quickly modify any document or transaction with updated dimensions
- Batch change dimensions for filtered lists of transactions or ledger entries
- Built-in protections include security, audit trail, and undo functions
- Great for fixing user errors, closing periods, and overall super-user sanity
- Update historical transactions with new dimensions
- View extended dimensions in the G/L Entry table instead of just the NAV global dimension

2. Dimension Management Setup

- 2.1. Search the "Dimension Management Setup" Page
- **2.2.** Click and open the Dimension Management Setup Page
