

MazikCare CareSupply Module

Optimize materials management for precision, value-based care

Patient

Frank needs to be able to order prescription refills and medical supplies directly to his home.

Delivery Worker

John needs to monitor the prescriptions en route to patient homes to ensure safe delivery.

Nurse

Nurse Jenny runs out of some essential supplies for managing her patients and wants to quickly order more items.

THE SOLUTION

CareSupply Module - Among materials management, central supply, nursing, and procurement staff, healthcare providers need coordination, real-time insights, and intuitive processes for supply purchase and replenishment.

PAR Management – With MazikCare CareSupply, clinicians and support staff can trust that they will have the right materials in hand exactly when they need them. Auto-count and replenish all internal materials; including medical supplies, medical devices, pharmaceuticals, and more. From preadmission to post-discharge, MazikCare streamlines and automates inventory processes for a holistic, value-based approach to cost management.

eProcurement – CareSupply simplifies the requisition process through an intuitive front-end shopping portal. Contracted items can be ordered through pre-established vendor agreements, with supplier and delivery processes automatically triggered. Other products can be sourced electronically through an efficient punch-out process that enables users to order from non-contracted vendors within the MazikCare application, with data processed into Microsoft Dynamics 365.

Track-and-Trace – Prescription packages travel through multiple distribution centers during delivery to patient homes. The Track and Trace PowerApp enables pharmacies to glance through the entire tracking history of a package or a container right from their handheld devices. Furthermore, environmental controls ensure that prescriptions are shipped in their right temperature containers.

THE BENEFITS

- ✓ Ease employee burden through an intuitive, timesaving purchasing portal
- ✓ Improve operational efficiency with streamlined PAR management
- ✓ Improve patient safety through track-and-trace monitoring on prescription and medical supply deliveries
