

MazikCare DataFusion Module

Unifies clinical and business insights into one platform to improve efficiency and reduce frustration

THE SOLUTION

MazikCare DataFusion connects data from EMRs and other clinical systems into the [Microsoft Power Platform and Azure technologies](#). With all data available in a single portal, providers and staff save time and make decisions faster.

Unified Data Model – Built on Microsoft’s Healthcare Common Data Service, this fully HIPAA-compliant solution enables healthcare customers to synchronize both clinical and financial data with Dynamics 365 and the Microsoft Power Platform. That means no more switching between platforms or tedious cross-referencing to get work done.

Pre-built Integrations – Leveraging HL7 integrations and FHIR standards, MazikCare DataFusion makes clinical and operational data far more actionable from Day 1. The industry-leading MEDIC integration connector not only reduces EMR integration efforts and timelines, but also lowers the cost of integration point management.

Azure Machine Learning – The power of machine learning applied to clinical, behavioral, and business data helps you identify trends and predict patterns in patient populations so you can put solutions to work earlier.

Artificial Intelligence – Guided AI implementation improves patient activation rates, medication adherence, and risk identification to reduce readmission rates and improve outcomes. The technology also helps automate repetitive tasks, giving staff time back for more important work.

THE BENEFITS

- ✓ **Faster ROI** with our pre-built data and EMR connector
- ✓ **Single platform** centralizes all data
- ✓ **Predictive analytics** create better outcomes
