

Invoice Processing Automation Starter Kit – Documentation

Introduction

Dealing with invoices can be a manual and tedious process for numerous companies. Automating this process smoothly and without deeply changing internal routines is often a challenge.

To respond to this problematic, we created a starter kit using Power Platform capabilities:

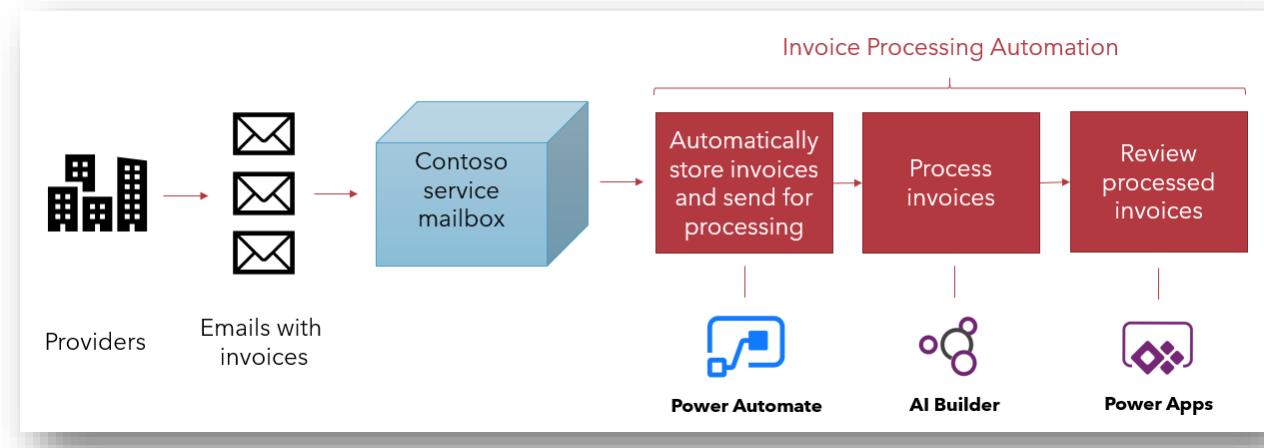

- A **Power App** that guides the user into configuration of invoices providers
- A set of dynamic **Power Automate flows** that manages the backend pipeline
- **AI Builder Forms processing models** that provide the intelligence for the invoice data extraction

This documentation explains the base principles and usage of this reference implementation.

Important: we are not providing a product with actual maintenance and support but a reference implementation that can be used and modified by our customers for their own needs.

Scenario covered

Our starter kit focuses on invoices received by email (outlook):

As this is a reference implementation, our customers are free to use and update the starter kit components to adapt to their system specifics.

Installing the Starter Kit

Role

The targeted person for the starter kit package installation should:

- Have good knowledge of Power Platform concepts (At least Power Automate connections and Common Data Service)
- Be aware of which company's organization to use
- Have enough privileges to configures Power Automate connections and add environment variables
- Owns the connection to the outlook service mailbox that will be used to receive the invoices

Power Users or Administrators are usually a good fit for this task.

Inventory

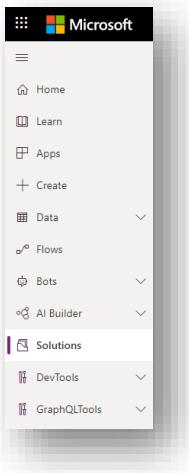

Following items will be installed with this package:

- A Power Apps “IPA Application” allowing to configure providers, track processing of invoices and edit them.
- A Power Automate flow “IPA Email” listening to new emails arriving in the service mailbox, extracting attachment, identifying the provider and creating an invoice processing request.
- A Power Automate flow “IPA Processor” calling the AI Builder model to extract values and updating the invoice.
- 4 Common Data Service entities
 - “IPA Provider” storing the information about configured providers, name, model, sender's email, mapping between model keys and expected fields.
 - “IPA Processing” storing the invoice processing requests, the file to be processed and the status of the processing.
 - “IPA Invoice” storing the values extracted from the invoice.
 - “IPA Region” storing which fields are required for a given region and which team controls access to invoice in this region.
- 2 option sets used inside “IPA provider” and “IPA processing” entities.
- A “Validator” role which is the role to assign to invoice validators. Power User will have the standard “System customizer” role.

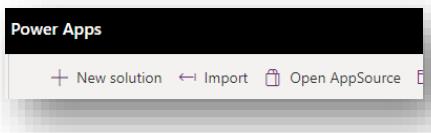

Process

To install and configure the Invoice Processing Automation package, you must follow these steps:

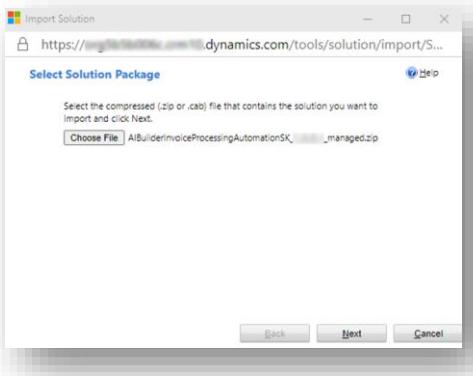

1. Download the AIBuilderInvoiceProcessingAutomationSK_managed.zip on your local file system.
2. In your Power App environment, navigate on left menu to “Solutions”.

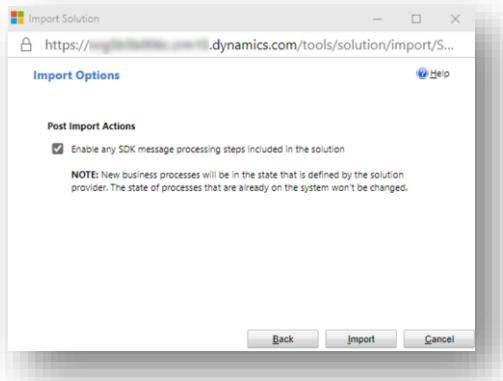

3. Click on the top menu on “Import”.

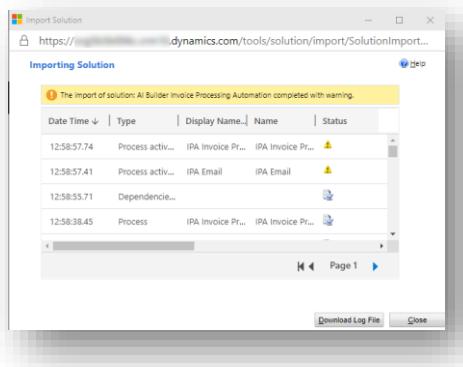

4. Click on “Choose File” and select the zip file in your local file system and click on “Next” and same on the following screen.

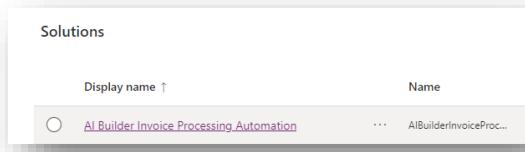

5. Then click on “Import”.

6. Once complete, you will get a report with warnings as you now need to configure the flows to enter Common Data Service credentials and configure the mailbox receiving the invoices

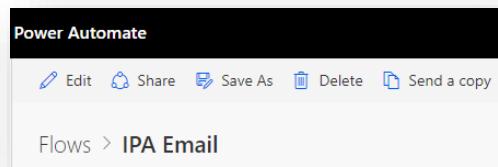

6.1. Now click on the “AI Builder Invoice Automation” solution

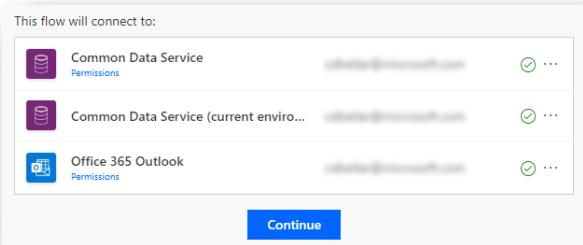

6.2. Then click on “IPA Email” flow

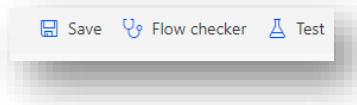

6.3. Click on “Edit”

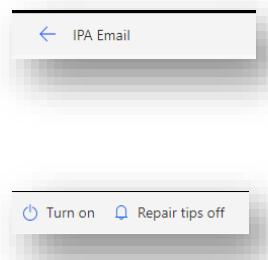

6.4. Fix the Common Data Service connection credentials and Outlook mailbox by clicking on “Permissions” or “...” to select an existing connection. Then click on “Continue”

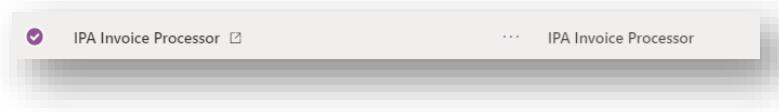

6.5. Save the flow.

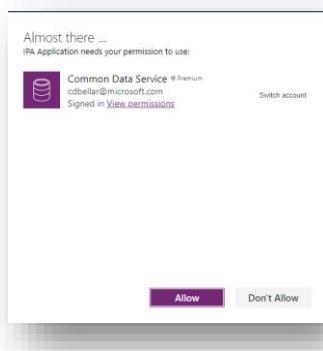

6.6. Click on icon and then “Turn on” the flow.

6.7. Do the same steps above for “IPA Invoice Processor” flow, also available in the solution.

7. When running the IPA Application for the first time you will be prompted to enter your credentials for the access to Common Data Service

Configuring Roles and Permissions

Role

The targeted person for configuring roles and permissions should:

- Have an overview of regional specificities and authorizations by region. They should understand which fields may be not required in some countries, which users should have access to which features.
- Have good knowledge of the Power Platform's role-based access control.

Power users are usually a good fit for this task.

The Invoice Processing Automation starter kit provides a basic implementation of role-based access control which is summarized in this table

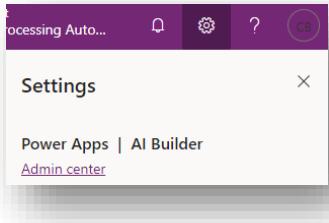

Built-in Role	Power User	Validator
Built-in Role	System Customizer	Validator (part of the starter kit solution)
Create and view region configuration	X	
Create and view models and providers	X	
Update and view processed invoices	X	Only the invoices in his region in Processed state if not already assigned to another person*

When someone opens an invoice, he automatically assigns this invoice to himself. Other validators will no longer see this invoice in the list and would get an error if trying to update it.

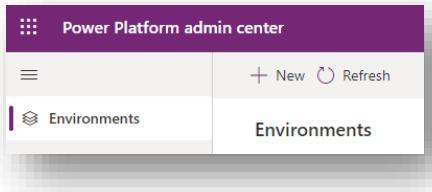

NOTE: If your company doesn't need to have role-based access control or have regional specificities, you can just assign the "System customizer" role and create a default region.

Configuring roles

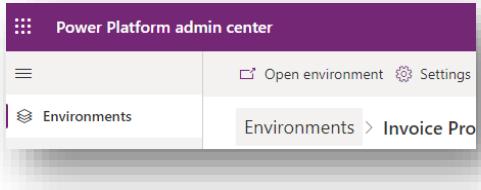

1. Open the Power Platform Admin center by clicking on the wheel in the top right of Power Apps or power Automate shell

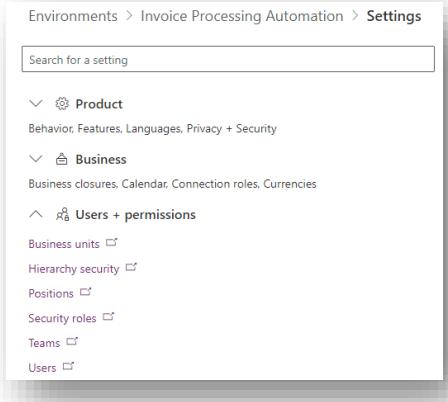

2. Click on “Environments” in the left menu

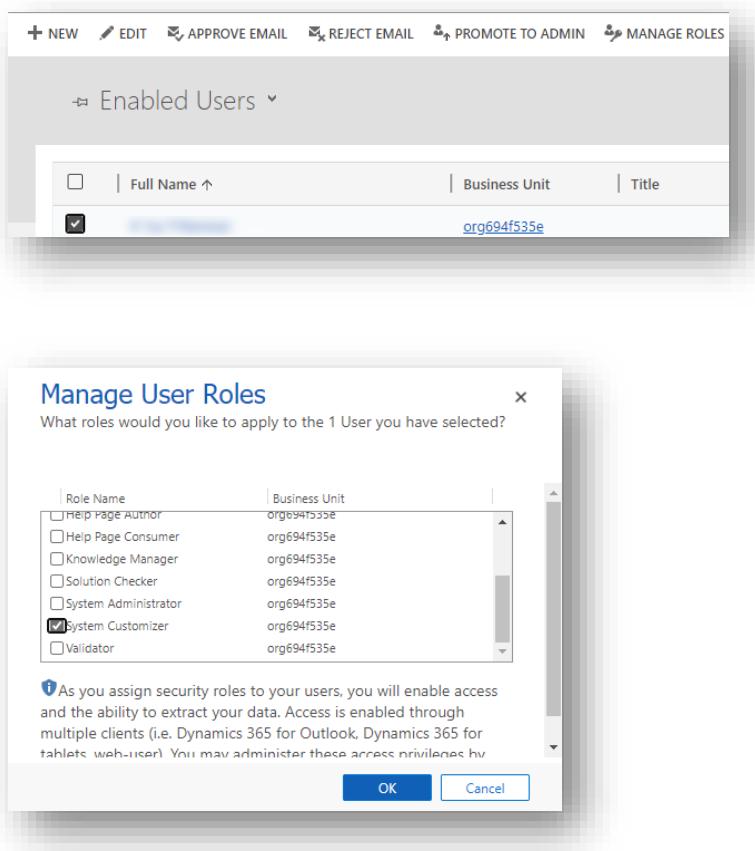

3. Select your environment on the right pane and click on “Settings”

4. Then click on Users. This will open the user management console.

5. To define a Power user, select a user from the list, click on top menu in “Manage Roles” and then assign the “System Customizer” role

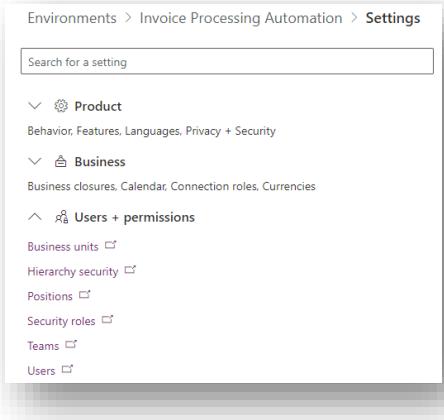

6. For Validators, do the same choosing the “Validator” roles also assigning the “Common Data Service User” role.

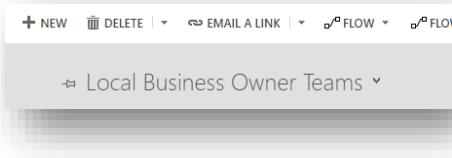

Configure regional permissions

We are now going to define which user can see processed invoice depending on the region where the provider is configured.

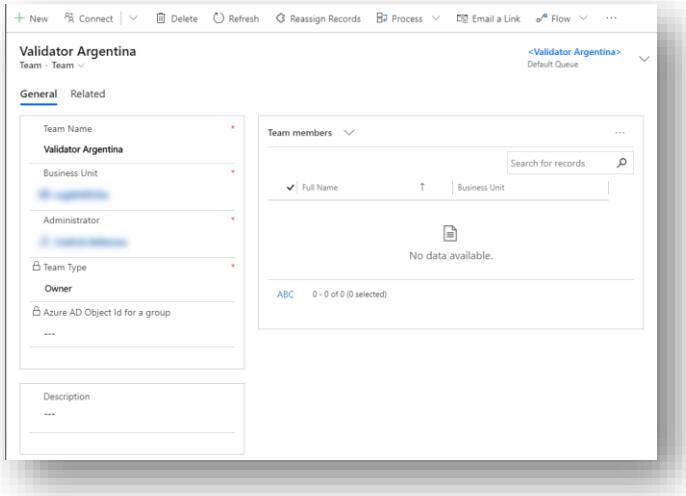

1. Still in the Power Platform Admin center, click on Teams. This will open the team management console.

2. Click on “+new” in the top menu, to create a new Team.

3. Set the “Team Name”, “Business Unit” and “Administrator”

4. Select the created team and click in the top menu on “Add Members” and enter the user name of the validator.

The screenshot shows two overlapping windows. The top window is titled "Search Results" and has a "Team Name" field containing "Validator Argentina". The bottom window is titled "Add Members to Team" and contains the message: "You have selected to add members to 1 Team. Click Lookup next to the Users box to select which members to add." It has a "Users:" input field with a placeholder and "OK" and "Cancel" buttons.

5. Now click in top the menu on “Manage Roles” and add the Validator role to this team.

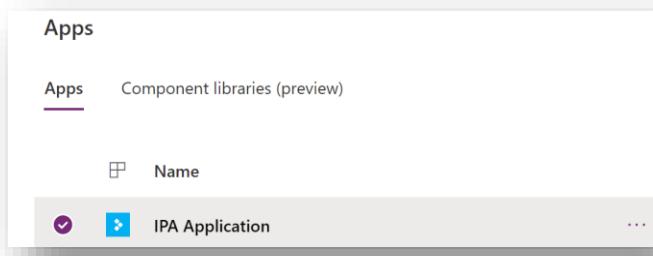

The screenshot shows the "Manage Team Roles" dialog with the message: "What roles would you like to apply to the 1 Team you have selected?". A table lists roles with checkboxes and their corresponding Business Unit IDs. The "Validator" role is checked. The dialog has "OK" and "Cancel" buttons at the bottom.

Role Name	Business Unit
<input type="checkbox"/> Help Page Consumer	org694f535e
<input type="checkbox"/> Knowledge Manager	org694f535e
<input type="checkbox"/> Solution Checker	org694f535e
<input type="checkbox"/> System Administrator	org694f535e
<input type="checkbox"/> System Customizer	org694f535e
<input checked="" type="checkbox"/> Validator	org694f535e

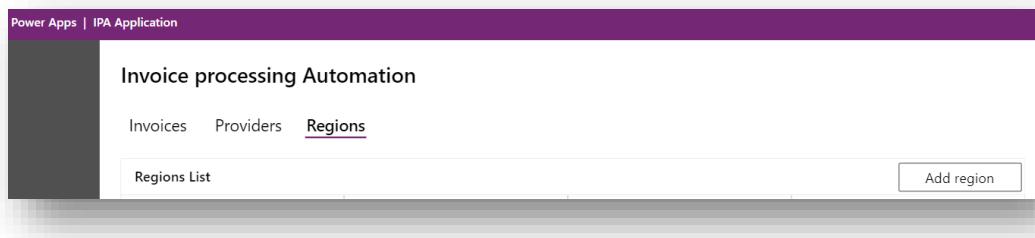

6. Now, we need to launch the IPA Application with a user with “System Customizer” role. Go to Power Apps and navigate on left menu to Apps

The screenshot shows the Power Apps mobile application interface. The top navigation bar has three dots and the text "Power Apps". Below it is a menu icon and the word "Home". The main content area shows a list with "Learn" and "Apps". The "Apps" item is highlighted with a purple background.

7. The IPA Application should be available (if not get back to previous section), click on it.

8. Go the “Regions” tab and click on “Add region”

9. Enter the region name, controlling team and required fields in this region

A screenshot of the 'Configure new region' dialog. The title is 'Configure new region'. It has a 'Name*' field containing 'Argentina' and a 'Delete region' link. A 'Team*' field is set to 'Validator Argentina'. Under 'Required Fields', there's a list of checkboxes for 'Bill To Name', 'Date Delivered', 'Due Date', 'Invoice Date', 'Sales Order', and 'Total Amount', all of which are checked. At the bottom are 'Back' and 'Save' buttons.

You have successfully configured role-based permissions for the Invoice Processing Automation starter kit and you are now ready to configure each of your providers and models.

Configuring Providers

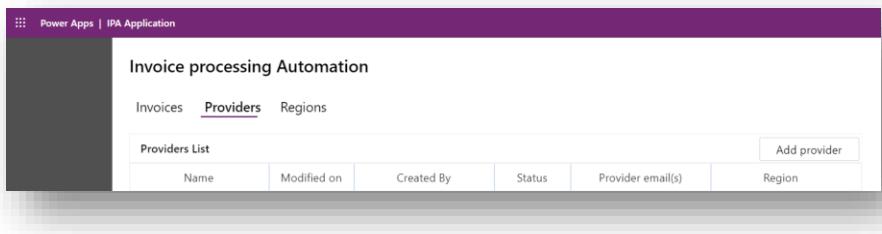

Role

The targeted person for configuring providers should:

- Have an overview of the various providers the company, how they are sending their invoices and get sample of these invoices
- Have good knowledge of AI Builder including building a Form Processing model

Power users are usually a good fit for this task.

1. Once launched, you should land to the provider list page. This is where you will see the list of all configured providers. Click on “Add Provider” to configure a new provider or click on an existing one to update it.

2. Enter a name for the provider and the address sending invoice to your company then click on “Next”.

NOTE: You can extend the starter kit by adding more connectors, Power Automate offers a large catalog of connectors like SharePoint, OneDrive, SAP...

You should copy the “IPA Email” flow, delete the initial action and replace it by the appropriate trigger. You can find supported triggers here <https://docs.microsoft.com/fr-fr/power-automate/email-triggers>.

You can also extend the “IPA application” and CDS schema to add additional fields on this page, for instance the SharePoint site where invoices should pulled from if you add this connectors in your implementation.

A screenshot of a configuration dialog titled "Configuration provider". It has three radio button options: "Create new provider" (selected), "Model selection", and "Fields mapping". The main section is titled "Create a provider" and contains a "Name*" input field, an "Email addresses*" input field with a note about semicolons, and a "Region" dropdown menu. At the bottom are "Save", "Next", and "Cancel" buttons.

- The next step is to select the AI Builder model that will extract keys from invoices. You must create an AI Builder model and will need get at least 5 samples of invoices for this provider. Invoices should have similar layout and fields. If your provider is sending invoices with various layout and fields, you should consider creating one provider and one model per invoice type. See <https://docs.microsoft.com/en-gb/learn/modules/get-started-with-form-processing/> to learn how to create an AI Builder form processing model. Once your model is created and published, you can refresh this page with “Reload models”, select the appropriate model and click on Next.

Configuration provider Fabrikam Argentina

Invoice processing with AI Builder model

To associate a model to a provider, pick one model on the list or create a new one on AI Builder. By clicking on the “new model in AI Builder”, you will be redirected on a new tab. Once you’ve created and published your model, come back here and refresh the model list to update the new models created.

Model associated:

Name	Modified on	Status
Fabrikam Model	10/04/2020	Active

Buttons: Back, Next, Cancel

- Microsoft has defined a list of standard fields expected in an invoice. You need to map the fields available in your invoice to it.
- NOTE:** You can extend the IPA application and CDS schema to add additional expected fields that are required for your business. You should also change “IPA Processor” flow provided in this solution to add these fields.

Configuration provider Fabrikam Argentina

Fields Mapping

Mapping of the invoice’s fields against Microsoft standard fields.

MS standard field name	Invoice field name
Bill To Name	Select Value
Invoice Number	INVOICE
Due	Due Date
Total Amount	Total
Date Delivered	Select Value
Invoice Date	Date
Total Tax Amount	Tax (2%)
Sales Order	Select Value

Buttons: Back, Save, Cancel

5. You have now successfully defined a new provider

Invoice processing Automation

Invoices Providers Regions

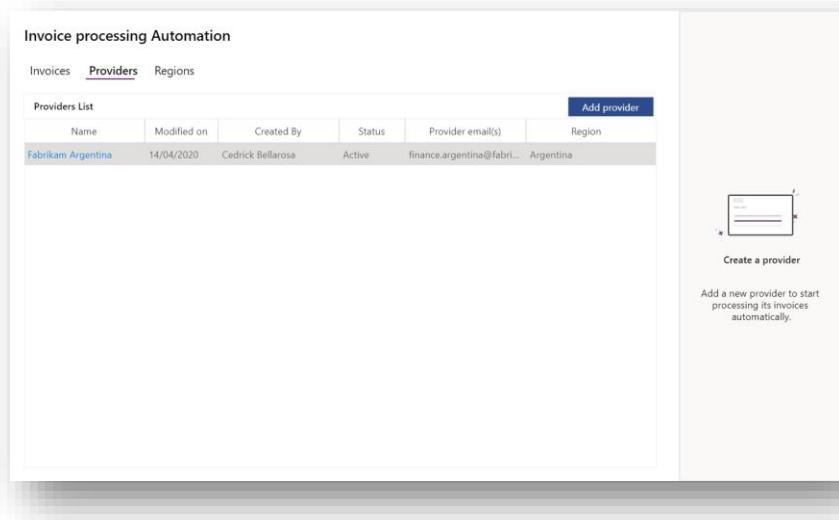

Providers List

Name	Modified on	Created By	Status	Provider email(s)	Region
Fabrikam Argentina	14/04/2020	Cedrick Bellarosa	Active	finance.argentina@fabri...	Argentina

Add provider

Create a provider

Add a new provider to start processing its invoices automatically.

Monitoring and reviewing processed invoices

Role

The targeted person for monitoring and reviewing invoices should:

- Get a good business acumen
- Understand in which system and how invoices should eventually be imported

Business users are usually a good fit for this task.

1. Still in the “IPA Application”, go to the “Invoice” tab. In the initial state, there will be no invoice to be reviewed. For the validators, the invoices are filtered based on their team and associated providers of this region.

The screenshot shows the 'Invoice processing Automation' interface. On the left, a sidebar titled 'Invoices' contains the instruction: 'Review and amend the processed invoices you received from your providers.' Below this is a table header for 'Invoices List' with columns: Invoice n°*, Received on, Amount, Provider, Status, and Due date. A 'Refresh' button is at the top right of the table area. A message at the bottom states: 'We didn't find any data to show at this time'. On the right side, a callout box titled 'Review invoices' contains the text: 'Click on an a processed invoice to review and amend the fields.' with a small icon of a document.

2. As soon as invoices will arrive in the service email box, the “IPA Email” flow will detect the new email, extract the attachment, determine the provider and will save this new invoice as pending to be processed.

The screenshot shows the 'Invoice processing Automation' interface. The 'Invoices List' table now has one row: 'New' (Invoice n°*), '09/04/2020' (Received on), 'Fabrikam Argentina' (Provider), 'In Process' (Status). The rest of the table columns are empty. The 'Refresh' button is still at the top right. The right side callout box 'Review invoices' remains the same: 'Click on an a processed invoice to review and amend the fields.' with a small document icon.

3. Once the invoice is processed by the “IPA Processor” flow, it will be shown like this in the page

The screenshot shows a web-based application titled "Invoice processing Automation". Under the "Invoices" section, there is a heading "Review and amend the processed invoices you received from your providers." Below this is a table titled "Invoices List" with columns: "Invoice n°", "Received on", "Amount", "Provider", "Status", and "Due date". The table contains three rows of data:

Invoice n°	Received on	Amount	Provider	Status	Due date
120001	07/04/2020	\$ 7458.57	Fabrikam Argentina	Processed	02/05/1981
120001	07/04/2020	\$ 7458.53	Fabrikam Argentina	Processed	02/05/1981
120001	05/04/2020	\$ 7458.33	Fabrikam Argentina	Processed	02/05/1981

On the right side of the table, there is a button labeled "Review invoices" with a tooltip: "Click on an processed invoice to review and amend the fields."

4. By clicking on the invoice number, you can access details, review extracted fields and edit incorrectly extracted values. Click on validate to save your changes. You can also skip this invoice and navigate to the next invoice to be reviewed with the “Next invoice” button

The screenshot shows the detail view for Invoice N°120001. At the top, there are search, refresh, and navigation buttons. The status is listed as "Processed". On the right, there is a "Delete invoice" link. The main area is titled "Fields selection" and contains the following fields:

- Invoice Number:** 120001
- Bill To Name:** Nod Publishers 921 South East St NY 98052
http://www.nodpublishers.com/ 555-432
- Invoice Date:** 15/08/2012
- Total Amount:** \$ 7458.57
- Due Date:** 02/05/1981
- Total Tax Amount:** \$ 146.13
- Date Delivered:** 01/01/1970
- Sales Order:** (empty)
- Comments:** (empty)

At the bottom, there are buttons for "Back", "Validate" (which is highlighted in purple), and "Next invoice".

5. The Power user has access to all invoices including the ones in error, validated and where Provider has not been found.

Invoice processing Automation

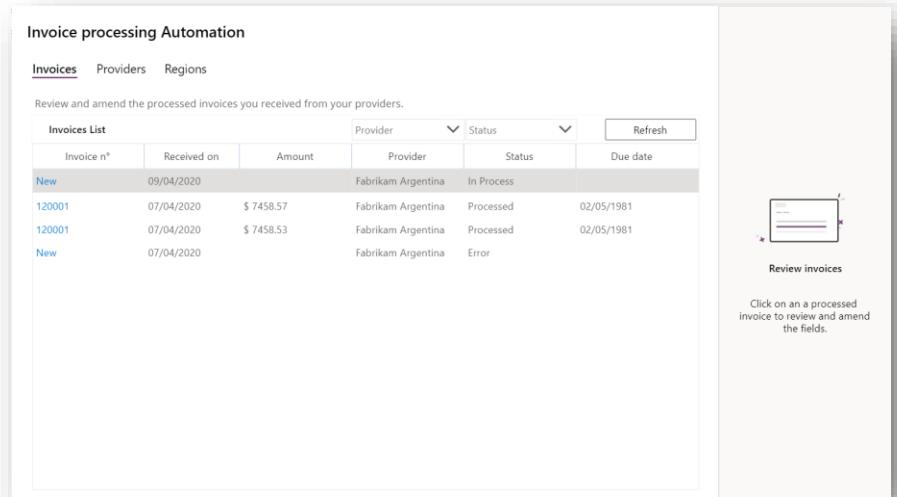

[Invoices](#) [Providers](#) [Regions](#)

Review and amend the processed invoices you received from your providers.

Invoices List		Provider	Status	Refresh	
Invoice n°	Received on	Amount	Provider	Status	Due date
New	09/04/2020		Fabrikam Argentina	In Process	
120001	07/04/2020	\$ 7458.57	Fabrikam Argentina	Processed	02/05/1981
120001	07/04/2020	\$ 7458.53	Fabrikam Argentina	Processed	02/05/1981
New	07/04/2020		Fabrikam Argentina	Error	

Review invoices

Click on an a processed invoice to review and amend the fields.

Limitations

- “Export to Excel” in the “IPA Application” is not yet implemented. Please go to Power Apps Data\Entity menu and “IPA Invoice” entity, then click on top button “Edit Data in Excel”
