Landed Cost Enhancement App
for Microsoft Dynamics 365 Finance

The Landed Cost Enhancement App enables an organization to effectively manage their landed cost needs. It seamlessly adds the ability to define landed cost destination and rates to add to purchase entries in Microsoft Dynamics 365 Finance.

Overview:

The Landed Cost Enhancement App enables the ability to define destinations and rates based on the type of transportation being used. When a purchase order is entered and a destination is selected, a freight entry is automatically created. If the actual freight rates changes, the Freight can be updated using Freight invoice details screen.
