Cyscale Power Cloud Platform

Multi-Cloud Management | Analytics | Security | Continuous Compliance

Gain control over your multi-cloud environment!
Control and Visibility

Most Cloud Providers operate under the Shared Responsibility Model, which puts you in charge of Security in the Cloud. You have the responsibility to protect your biggest asset: your data. Having a single dashboard to visualize and protect your multi-cloud infrastructure is the best way to tackle the advanced persistent threats targeting the Cloud.

Regulatory Compliance and Standards

The moment you start using any cloud provider, you must ensure compliance with various regulations and certifications. Each industry is different and can fall under the incidence of sector-specific legislation such as HIPAA for health data in the US or NIST for organizations working with the US government or general standards like CIS or PCI-DSS for payments. Not to mention law enforced data protection regulations like GDPR in Europe or CCPA in California.

Cloud-Native Security, powered by AI

Baked-in Security for modern Cloud Apps, Services, Infrastructures. Kubernetes, Docker images & containers, Terraform, Serverless, Cloud Resources… too many to even remember, let alone manage! We have you covered with a single, agentless tool so that you don’t have to install and maintain anything. Cyscale Platform was born in the Cloud to protect the Cloud.

Cyscale Power Cloud Platform features

**SaaS or customer-owned (in your cloud environment as K8s)**
We deliver either a Software as a Service solution hosted on world-class cloud systems, or a pure microservices architecture deployable as a Kubernetes Helm chart. It's up to you.

**Multi-Cloud Inventory and Visibility within minutes of setup**
Instantly discover all assets across AWS, Azure, GCP, and Kubernetes environments. Visibility is the first step for a complete and accurate cybersecurity program for any company.

**Out-of-the-box rules for security and compliance policies**
Cyscale developed hundreds of rules that act as guardrails on your cloud environments providing continuous security checks for PCI-DSS, HIPAA, GDPR, ISO & many more.

**Transform DevOps into DevSecOps with IaC scan and integrations**
Shift left and integrate Security as early as possible in the development lifecycle and ensuring that infrastructure is delivered fast, secure, and without putting more overhead on your teams.

**Automatic remediations and self-healing powered by AI**
By continuously monitoring and adapting to the ever-changing cloud infrastructure in your organization, Cyscale automatically generates tailored alerts & solutions for your exact needs.

**Agentless installation, instant setup, and no maintenance overhead**
Regardless of the chosen model of how you use the Cyscale Power Cloud Platform, you are always going to have the same worry-free experience with no agents to install or maintain.
