

## The Future of Customer Experience is now

Boost your reputation, collect valuable customer data, increase customer satisfaction, strengthen customer retention, and gain new customers through peer recommendations.

Enerfy Loyalty offers the ability to customize and reach out with a ready-to-go-loyalty program.

The product gives you the power to create an engaging program that generates customer loyalty and increase sales.

Enerfy Loyalty promotes four levels of gratitude that reduce the cost of the deductible and endorse safer drivers and loyal customers.

### How does it work?

#### Seamless integration

No IT integration and no need for any policy changes – it comes on top of any existing product. Provide phone numbers of the customers you like to invite, and we take care of the rest.

#### Customer onboarding

All invites receive a text message and with one-click the App2Car is downloaded. No more hassle, no more hardware.

#### Real-time risk insights

Enerfy Risk Portfolio Tracker provides each drivers' risk profile, i.e., the drivers' probability of being involved in an accident. Down to detailed per trip data.

#### Safe driver gamification

For each trip, the driver collects points based on their safe driving. The more points, the better achievements you get. The more progress, the higher you climb the status ladder. The higher the status, the lower the risk, and the lower the deductible becomes. A win-win worth its name.
