CB Exchange Server Sync

Synchronize multiple Microsoft Office 365/ Exchange/ Outlook/ Gmail accounts

What is CB Exchange Server Sync?

CB Exchange Server Sync is the solution for **secure synchronization** and **migration of data between Exchange Servers**. It enables easy synchronization of multiple Outlook accounts hosted in Exchange Server or Office 365.

Fully customizable to your business needs. It can be used as **one-way or two-way synchronization of calendars, emails, tasks, contacts, and public folders**.

This solution supports seamless migration of your entire Exchange / Outlook model to Office365, or other Exchange versions from Exchange 2010 SP1 and all newer ones.

Why is this important?

Do you work for two companies and use two different Outlook mailboxes? You may know the pain of **overlapping calendar appointments**. Now all **contacts, calendars, emails, tasks and public folders** in one place – time saved, productivity improved. Other uses:

- For **Mergers & Acquisitions** when two or more companies have their mailboxes with different versions of Exchange or different domains;

- For **joint ventures** where multiple project groups need to collaborate over a long period of time;

- **Consultancy companies** where consultants have mailboxes with several clients;

- For **managing shared resources** like conference room booking between different Exchange servers.

Why customers use CB Exchange Server Sync

No more overlapping bookings or missed appointments. CB Exchange Sync keeps all info in one calendar

- Easy in use: define mailboxes to sync and the rest is done for you

- Easy to choose what exactly to sync: calendars, contacts, emails, folders or all together

Testimonials

"I can make a change to one calendar, on one device and the change is made to all calendars on all devices immediately."

Chief Outsiders

PAM CABALKA
from CMO at Chief Outsiders

"... We use CB Exchange Server Sync to keep multiple references to the same resource in sync among multiple domains. This helps users from different organizations to avoid duplicate bookings and see accurate availability"

Connecting Software

How does it work?

CB Exchange Server Sync can be installed on-premises or in the cloud. Unique software allowing real server-side synchronization, and not only synching a client with a mobile device.

This tool uses a **Windows-based** service which performs the synchronization. It runs in a **non-blocking** mode with Exchange. Therefore it does not influence the general performance of Exchange – no downtime for your mailbox. **Easy user interface** is available with options to customize the sync process.

Key Features

Security and Confidentiality

You don't need to show completely populated calendar to anyone. With CB Exchange Server Sync, you can indicate you are busy at a particular hour, but not inform people what exactly your appointment is about. Data integrity is ensured with secure, encrypted connections.

Synchronization and migration of Outlook accounts

Your data are synced to the server, not in the client or device you use. For teams in various locations, the service ensures access to up-to-date information, at all times. Supports migration of complete user mailboxes & data, with no effect on user settings or data, and zero downtime.

Sync Hotmail, Outlook.com Accounts

Are you using Hotmail or Outlook.com mailbox? Sync it with your Exchange Server, Office 365 Outlook mailbox, Gmail and G suite. Since Hotmail, Outlook.com was bundled into the Office 365 suite, you can use our service to sync your Outlook.com mailbox. Merge your personal Outlook account with your work or school account automatically.

Fully customizable controls and features

Easy-to-use graphical user interface enables you to configure the synchronization options, such as the synchronization period, items to synchronize and more. The synchronization process runs in parallel with Microsoft Exchange services and has no impact on the performance of Exchange Server.

Benefits

- Cross-domain synchronization
- Flexible customization
- On any client interface
- SaaS or Self-hosted
- 24/7 Real-time Synchronization
- Easy-to-setup & use
- APIs only
- No backend Access
- Safe and Secure

Built on CB Exchange Server Sync Concept

Super Secure Exchange Server Sync

CB Super Secure Exchange Server is the solution to prevent hackers using Exchange Server as entry point to a secure network.

The solution allows people access their Exchange/Outlook mailbox items outside the local network without any problem of getting hacked.

This is the solution for high-security enterprise, public sector and Exchange environments.

Learn More

Solution Benefits

Security
Isolation of environments. Since you are not exposing to outside world your Corporate Exchange Server, susceptibility to malicious attacks are reduced dramatically.

Validation Rules
Messages passing by the Gateway are structured / formatted in table format (rows, columns). It is simple to create rules to validate content.

Maintenance
As your business and new data protection regulations evolve, it is simple and fast to adhere to those in a centralized place (Gateway).
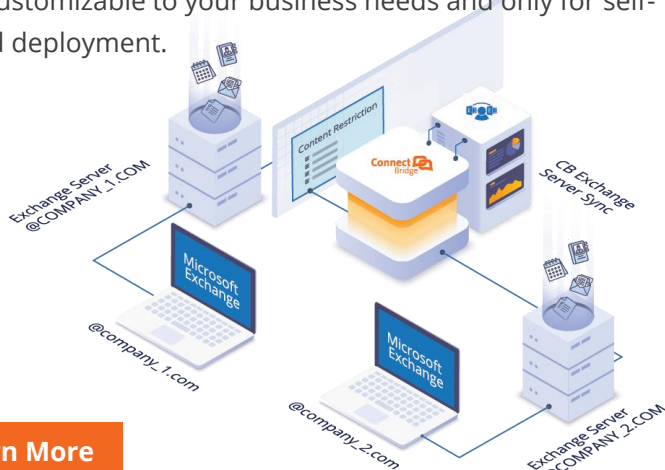

No direct calls
No "direct" EWS calls from one network to another

Exchange/ Outlook Content Censor

Exchange/ Outlook Content Censor allows to access your Exchange account outside the company without exposing sensitive information. You can control what to restrict such as: attachments, address, signatures, names, documents and more.

Fully customizable to your business needs and only for self-hosted deployment.

Learn More

Features

Allow employees to access their data from outside local network in a secure manner

Control confidentiality of mailbox data & limit what is sent "outside"

Prevent data breaches from mobile devices automatically in case they are stolen or hacked

Allow remote access to the Outlook calendar for urgent appointments or change of plans

Attachment and body text items restrictions

Automatically remove attachments and configure maximum characters in email body

Control user subject prefix for easy recognition of restricted email

Cloud vs Self-hosted

Our Secure Cloud
Run it on our Azure-built SaaS platform

Self-hosted
Run it on premises or on your/ any cloud servers/virtual machines

Our Secure Cloud	Self-hosted
Zero maintenance, we take care of everything	**Full control** over data
Perfect for **small** and **mid-size organizations**	Ideal for **large-scale deployments**
No hardware requirements	**Minimal** hardware required
Simple, **straight forward** and **easy** registration	**Simple** process and takes **less than** one **1 hour** to complete
Easy configuration and **full control** over the entities to sync	**Easy** configuration and **full control** over the entities to sync
24/7 precise synchronization based on your configuration	**24/7** precise synchronization based on your configuration
