Industry/Vertical

VCV is a platform that makes hiring process smart and fast with short recorded video resumes and AI-based assessment (auto proctoring, speech to text, AI Competence). Clients can build the whole pre-screening process on VCV and shorten hiring time by asking the applicants to record an [asynchronous video interview](#) (a video response to the client's questions) and watch it anytime after. [Very time-saving](#), as 70% of interviews could be finished after 2 minutes in average. Extremely relevant during COVID because this one-side format lets both sides take part in the process of interviewing independently. HR-experts can easily take decisions not spending days on endless zoom calls. [Here is a video](#) to see how the platform looks from inside.

A focus on large business entities of any industry with 300+ workers. Already experienced in Retail, IT and Telecom, Pharma, [FMCG](#), [Education](#), [Banking](#) and Finance, [Consulting](#) and many others
