

Our medical application named Parrot supports the business of the medical system to adapt to a digital world, to treat more patients and to facilitate and organize the work from the medical offices. It can be used from any browser, regardless of the device.

The multiple advantages brought to our clients are the following:

- ☒ Long-term storage of medical information
- ☒ Mobile healthcare from Cloud
- ☒ Scheduling history
- ☒ Purchased medical packages history
- ☒ Quick and easy access to patient files
- ☒ Reports about daily/monthly activity
- ☒ Advanced doctors search
- ☒ Advanced patients search
- ☒ A user's profile with the possibility to add personal information (sex, age, weight);
- ☒ User Management
- ☒ Advanced Schedule Calendar

Simple, intuitive and powerful, the Parrot Application streamlines the daily activity of clinics and specialists by automating the flows related to patient appointments, investigations, medical program, distribution by doctors.

By using the appointment module, the client can record the doctors' daily schedule, work schedule exceptions, rest leave, appointments and he can send informative notifications by Email or SMS to patients or doctors.

For each module (Medics, Patients, Appointments, Schedules etc.) there are features for adding, editing or deleting information.

Our customers' data is very important for us and this is the reason that security and privacy have become the main concern for the application.

Each user is restricted according to their role in the clinic and has access only to the modules for which it is competent. Being user friendly, the assignment of the use rights can be modified at any time even by the client.

The Parrot Application was designed primarily to be easy to use by anyone without effort.

Another important quality is that our product can be quickly modified. Being built of modules, it can be customized based to our customers' needs.

The reporting module will help the client to keep track of the sold medical packages, the total number of the appointments or registered patients.

Parrot is specially created to oversee and organize the health service administration. This solution allows monitoring all the information regarding the patients, the appointments, the packages and to centralize them in a totally integrated database, which reveals a clear picture of all the activities.
