

Veritas Enterprise Vault.cloud

Software as a Service
Archiving and eDiscovery

OVERVIEW

Veritas™ Enterprise Vault.cloud is a cloud-based archiving service that helps regulated organizations more effectively meet data governance requirements, and more efficiently execute business or legal eDiscovery. Thousands of customers have used Enterprise Vault.cloud to help ensure a successful and compliant migration to a cloud based application platform such as Microsoft Office 365 or Google G Suite Enterprise.

SIMPLIFIES RETENTION MANAGEMENT

Enterprise Vault.cloud interfaces seamlessly with Office 365, Google G-Suite Enterprise, as well as on-premises mail systems such as Microsoft Exchange Server or IBM Domino to ensure information is properly retained. A default retention policy may be applied to all archived information, or role-based rules may apply to specific individuals, so that customized retention periods can be assigned. Even email for departed employees covered by your retention policies is retained at no extra charge. Options are also available to capture unified communications, including instant messaging and social media, Microsoft Sharepoint documents, and more.

STREAMLINES COMPLIANCE AND ENSURES DEFENSIBLE EDISCOVERY RESULTS

Enterprise Vault.cloud leverages the native journaling capabilities of enterprise email systems to capture emails, attachments, and all message metadata, and then it time stamps, serializes and gives archived content a unique signature to ensure authenticity. The Journaling process ensures full content and recipient capture, so you always know who received what, and when, regardless of user behavior.

Enterprise Vault.cloud enables Legal Hold to be applied broadly across keyword searches and users - or to target specific legal custodians - without putting mass restrictions on large groups or domains of users or challenging retention management requirements established to address regulatory compliance. Whether legal hold is in place or not, with Enterprise Vault.cloud and journaling, even if an end user deletes or modifies a message in their Inbox or Personal Folders, the original copy remains in the journaled archive.

SUMMARY

Enterprise Vault.cloud helps customers-

- Ensure retention practices for regulated organizations comply with applicable laws and eDiscovery practices are defensible.
- Preserve email and other unstructured data by policy, as journaled records in a high-availability repository, protected against unauthorized or accidental deletion.
- Provide rapid search, legal hold, case management and eDiscovery workflow to reduce cost, and improve productivity of both IT and litigation support staff.
- Transition from CAPEX to OPEX financial accounting models, offering subscription licensing for a predictable monthly fee to stabilize and control archiving costs, regardless of data growth.

Enterprise Vault.cloud search and eDiscovery capabilities provide workflows to quickly scan massive amounts of data, iteratively filter out non-relevant results, then collect and organize the results by cases or legal matters. Millions of records can be searched and collated in a matter of seconds. When collection is complete the results can be made available on-line to outside legal partners. During review, role-based access controls help ensure that data is properly handled so that a secure evidentiary chain of custody is always automatically maintained.

Enterprise Vault.cloud interfaces with Office 365, Google G-Suite Enterprise, or on-premises mail services

A COMPLIANCE-READY, BEST PRACTICE PLATFORM

Enterprise Vault.cloud enhances your Office 365, Google Enterprise email, and overall information governance by providing unique Best Practice compliance, and eDiscovery benefits:

- Standardizes retention management compliance through automation and by providing proof of policy-driven retention processes.
- Satisfy strict legal requirements by immutably journaling all records and ensuring a secure chain of custody for handling evidentiary data.
- Improves Investigation Workflow by granting role-based access to enable segregated work, allowing some staff to search and collect and others to only review.
- Streamlines email migration, simplifying your move to cloud-based email from traditional on-premises email systems by archiving your legacy data first—whether it is stored on tape, PSTs/NSFs, or trapped within existing on-premises servers.
- Integration with the Veritas™ eDiscovery Platform, offering customers a more powerful analysis and review platform if needed.

ENTERPRISE VAULT.CLOUD SERVICE

The core Enterprise Vault.cloud service consists of the journal data archive system and its web-based management applications, plus optional Personal Archive for end user search and retrieval and Discovery Archive for federated search and eDiscovery. Other services available with Enterprise Vault.cloud include the following:

OPTIONAL SERVICES

Folder Sync Service

FolderSync synchronizes users' existing Outlook folder structures in Enterprise Vault Personal.cloud archive, allowing users to seamlessly view their archive folder structure just as they would their inboxes.

Classification Integration

Utilizing the same classification engine as Enterprise Vault and other Veritas products, Enterprise Vault.cloud can classify archived information and apply tags, where there are policy matches, to help streamline eDiscovery processes.

Veritas Enterprise Vault Mailbox Continuity

An add-on feature for Office 365 mail which helps maximize email availability and guard against disruption and data loss that can result from an email outage. The service automatically activates when an outage occurs, allowing your users to continue sending and receiving messages via their archive while the mail system is unavailable.

Veritas AdvisorMail

An application service for Office 365 that can meet FINRA/SEC broker dealer supervision requirements for email communication. AdvisorMail algorithmically samples and collects email for supervisory review and meets immutable WORM storage requirements.

Legacy Data Ingestion Service

Veritas can import (ingest) legacy email data from your email environment so that you can consolidate and retain all of your data in long term storage in a single location.

COMPLEMENTARY SERVICES

Usage Notifications

Proactively manage your license subscription by leveraging notifications that flag when a specific percentage of committed usage is exceeded.

Enterprise Vault.cloud Cloudlink Tool

A synchronization tool for your Microsoft Active Directory or Domino Directory with the archive. In simple terms, each time a new Exchange or Domino user is created, a new archive account is automatically provisioned for them in Enterprise Vault.cloud.

ABOUT VERITAS TECHNOLOGIES LLC

Veritas Technologies empowers businesses of all sizes to discover the truth in information—their most important digital asset. Using the Veritas platform, customers can accelerate their digital transformation and solve pressing IT and business challenges including multi-cloud data management, data protection, storage optimization, compliance readiness and workload portability—with no cloud vendor lock-in. Eighty-six percent of Fortune 500 companies rely on Veritas today to reveal data insights that drive competitive advantage.
