

Get Value From Azure IoT Faster With Unified Device Data

How to Scale IoT and Beat the Complexity of Industrial Device Data

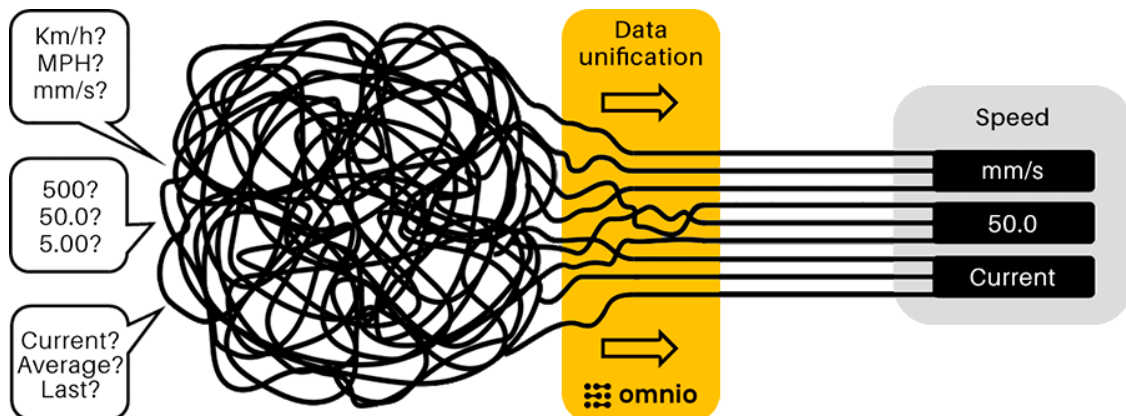

IoT solutions like remote monitoring, predictive maintenance, and other advanced analytics hold great potential for industrial enterprises. Unfortunately, it is all too common for implementations to grind to a halt when moving from PoC to live production. As the number of device data sources increases, teams get overwhelmed by the need to write and maintain custom code to collect, normalize and prepare data before it can be analyzed. As a result, timelines seem to stretch into infinity while the cost-stack and frustration grow.

Omnio is a fast and simple solution to deal with the complexity of device data. Omnio has already done all the hard work of mapping thousands of industrial devices and unifying their data models.

This means you can:

- Collect unified device data in a few clicks
- Remote configure Kepware from within Azure
- Easily scale your IoT solution

Unified Data is Essential for Industrial Transformation

Big Benefits for Your Industrial Transformation Journey

It's easy

In a few clicks, anyone can collect data from industrial devices

It's predictable

Get clarity and predictability with Omnio SaaS pricing

It's unified

Device data is always unified with common labels, units, and scaling – ready for analysis

Important Features for Successful Industrial Transformation

Data Unification

Normalize all your device data across categories, manufacturers, and models.

Easy User Interface

Manage your edge connectivity from a centralized and integrated application.

Remote Management

Simple PLC onboarding and management of devices from cloud in Kepware.

Automatic Provisioning

Easy setup of Azure IoT edge and cloud environments.

Vast Device Connector Library

The market's largest library at your fingertips.

Secure

Omnio for Azure IoT utilizes Microsoft's build in security- and data transport layer.

Technical Requirements

Azure IoT Edge

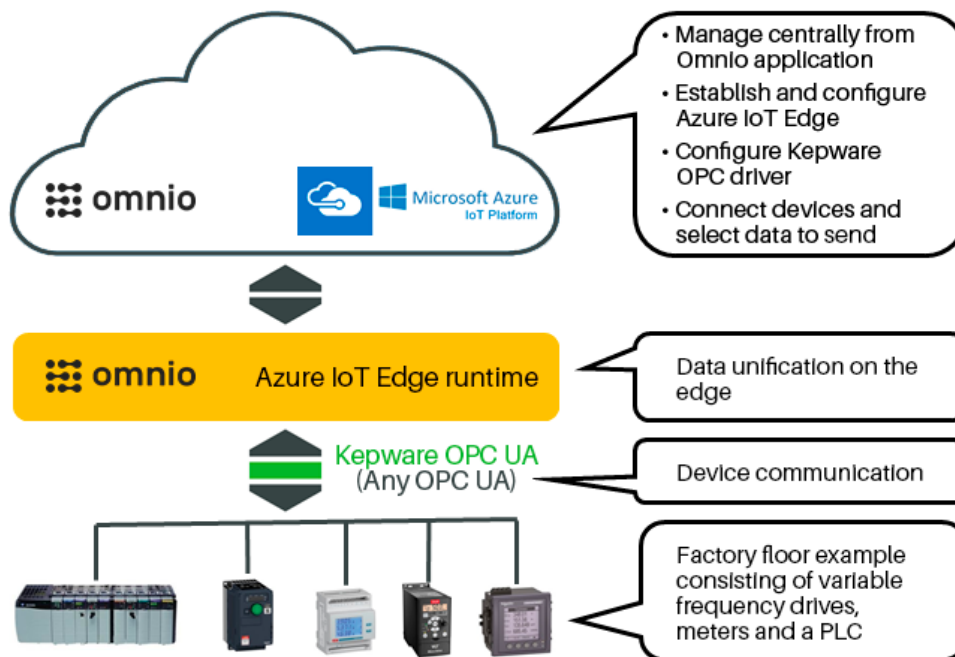

Omnio for Azure IoT runs as part of Microsoft Azure IoT Edge.

See further requirements: <https://docs.microsoft.com/en-us/azure/iot-edge/support>

KepwareEX

Version 6.5 or newer.
