# Origami

Hummingbird Release

Feature Guide

The largest release and greatest improvements made to the Origami Intranet platform to date.

This major release of Origami is aptly named 'Hummingbird' for its elegant beauty, superior speed and social intranet features. The latest release of Origami is built on modern SharePoint and delivers a complete transformation, providing revamped communication and employee engagement features on a lightning fast platform.

Lightning-Fast Technology: ReactJS, SASS and Modern SharePoint

The Hummingbird release of Origami delivers a complete rebuild of Origami SharePoint intranet from the ground up. Origami Intranet has been completely rebuilt on ReactJS, SASS, and the latest modern SharePoint Framework. We understand that not all organizations have upgraded to modern SharePoint so the great thing is that organizations can use many of the new Origami apps built for the new modern SharePoint features with their existing Origami intranet, without having to upgrade to modern SharePoint.
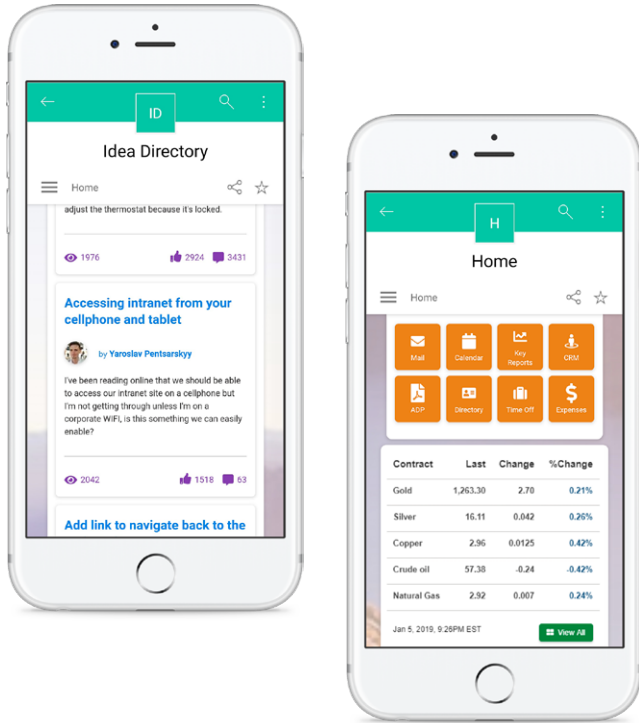

Improved Intranet Search

Now you can find the information you need faster than ever before with Origami's Hummingbird release. In addition to SharePoint global search, Hummingbird introduces focused content directories to house Templates, How To's, Policies and Procedures and other document types.

The latest search capabilities in the directory app of Origami SharePoint intranet mean that information such as documents and articles are displayed in order of popularity so that the most commonly-used information surfaces first, saving employees valuable time.

Users can filter search results by selecting a particular topic or 'tag' during a search query, the results within the particular topic are then displayed in order of popularity. The directory also makes it easier for users to download relevant assets relevant to the article, such as forms or templates.

Authors can create new posts in-place without leaving the page. The directory is permission aware and all content and author tools are displayed based on the permission level.

User Interface Updates

We've rebuilt the news and events carousel for SharePoint modern to deliver an improved user experience while displaying more information. Along with delivering centralized company news and events, Origami Intranet's latest update provides the ability to easily group and filter news and events by region, location or team to provide a personalized content experience to users.

The Origami Hummingbird release includes enhancements to the user interface of the employee directory to provide a more engaging user interface along with enhanced search capabilities. Users can easily find who they're looking for by filtering the information by location, department and any other parameter in active directory.

Fully Responsive Mobile Intranet

Origami is fully integrated with the SharePoint mobile app and Microsoft Teams and delivers a fully responsive mobile intranet experience on IOS and Android. Whether you're on your phone, tablet or laptop your Origami intranet experience is seamless.
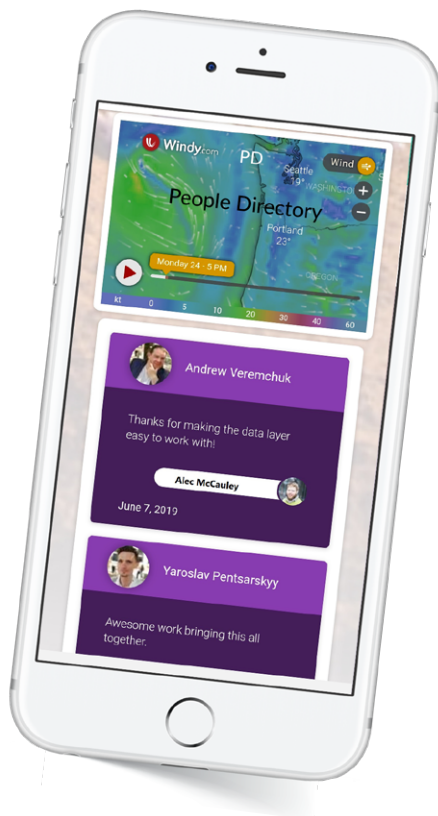

Users who download a mobile app can set their homepage and use Origami SharePoint intranet capabilities alongside SharePoint modern features in a seamless way.
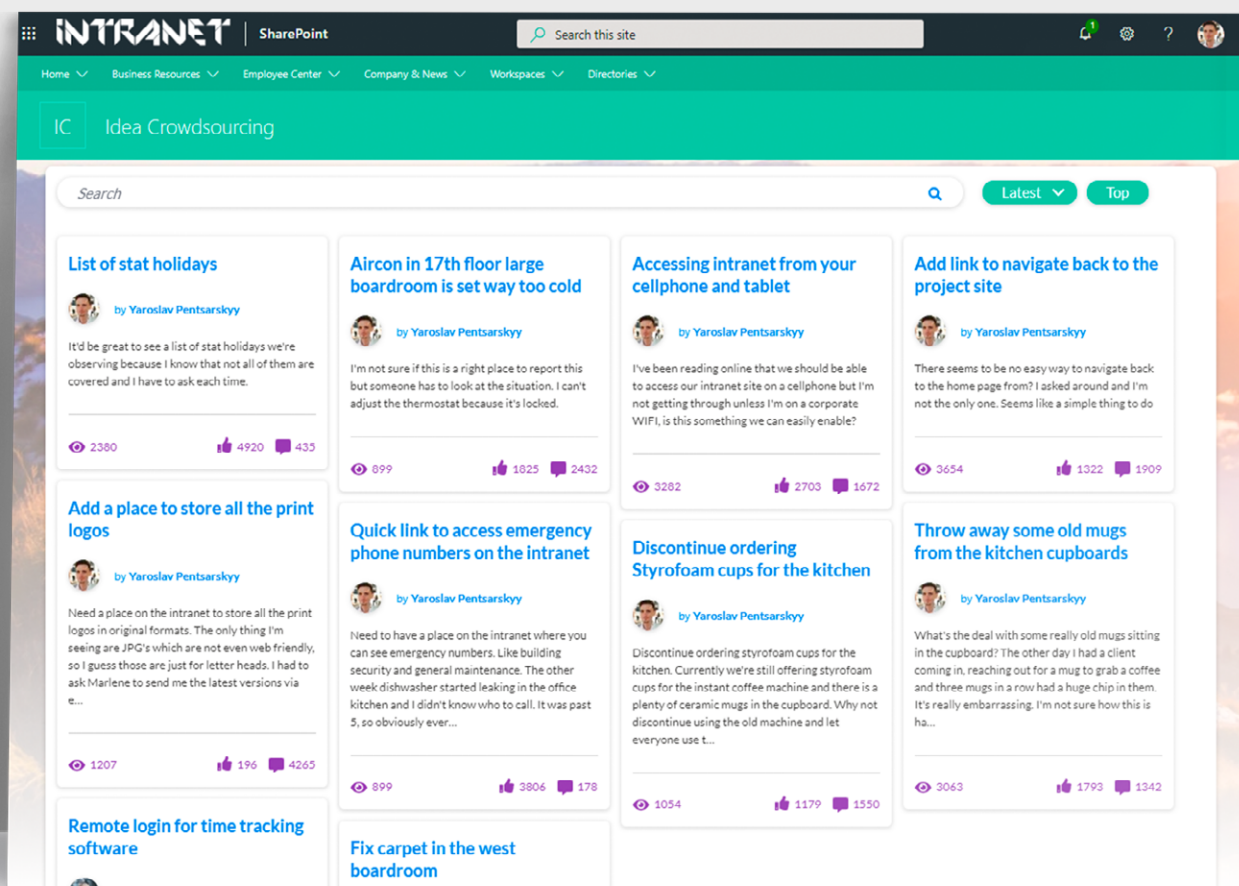

Improved Employee Recognition

The improved Employee Recognition user interface provides a beautiful card layout with infinite Pinterest scroll that scales to any device whether it's a mobile, laptop, computer or tablet.

Employees can nominate their peers instantly or administrators can set an approval process based on your company policies.

Employee Bulletin Board

The employee bulletin board feature is an exciting 'social corner' experience on Origami Intranet's Hummingbird release, that's fully mobile-responsive and enables employees to contribute content to the intranet. The beautiful user interface includes a tiled display of images along with introductory text and users can click on the titles they're interested in to view further details of a post.

Idea Crowdsourcing

The latest release of Origami intranet delivers an interactive crowdsourcing and idea management experience that provides enhancements for ranking idea engagement. Now, employees can post new ideas and the rest of the organization can comment and rate the ideas, encouraging idea generation. Updated features include visibility into how many people have voted on an idea to quickly gauge popularity. Employees can search ideas by keyword or filter by most recent or most popular ideas.

Newly posted ideas can be automatically available on the site or go through the approval process based on administrators setting.

Customized Intranet Branding

In the Origami Intranet Hummingbird Release, there have been huge enhancements to the custom intranet branding to incorporate your primary and secondary brand colors so that they're displayed throughout all tools on your Origami intranet. Authorized intranet power users can easily update the color scheme and a background image and push the updated color scheme across your entire SharePoint intranet with a click.
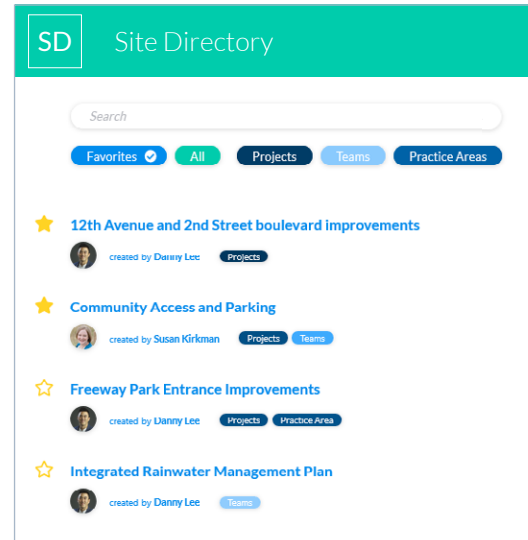

Color variances can greatly help with categorizing different types of content at a glance, so power users can edit different color categories in the site configurations.

Origami seamlessly integrates with SharePoint themes to allow site administrators chose specific color theme, logo, and navigation for their team sites while components and apps will still inherit overall corporate brand.
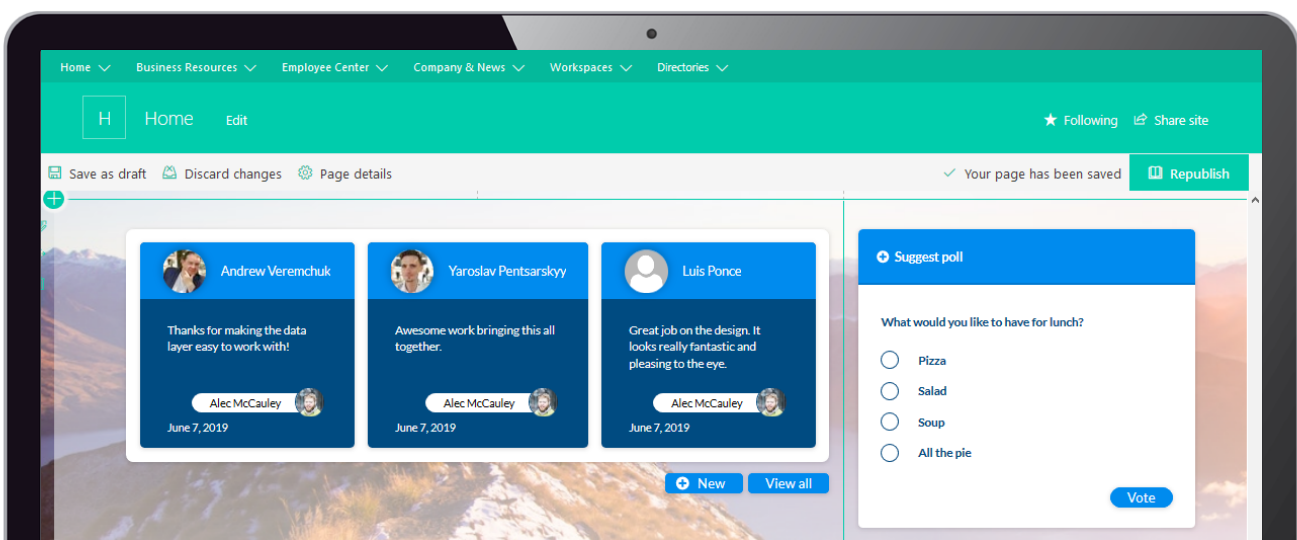

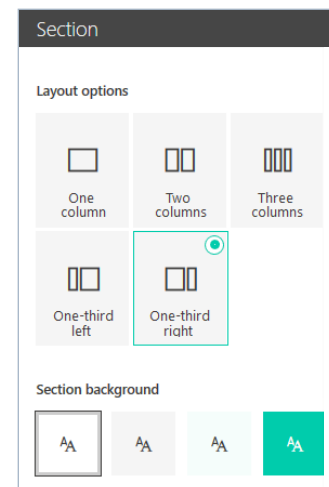

Employee Favorites

Personalization capabilities with Origami's latest release, gives users the ability to add their favorite projects, teams and other sites to a personalized list of their most-used sites or projects for quick access to the information they use most. The directory is security aware, so users who already have access to the site or team can see it in search. Sites are categorized by their owners and can be easily identified and filtered by when users look for them.

NEW Homepage Layouts

There are multiple options for homepage layouts in the Origami Hummingbird release enabling organizations to choose the display that works best for them from card display, to list view and infinite scroll, organizations can have their intranet configured to their needs. You can combine multiple layouts on a single page where you can have one section with a 3 column layout and below it, a section with a single column layout. Origami apps adapt seamlessly to many of the layouts saving content authors time when authoring new pages.
