Planner Aggregator (PAG)

APPLICATION DESCRIPTION

Planner Aggregator (PAG)

WHY AND WHEN TO USE THE PLANNER AGREGATOR SOLUTION

Once your company starts to use all the nice things that M365 offers, especially Teams and Planner, you might get to point where you will end up having multiple Teams and multiple Plans in each of these Teams. Planner offers nice task and plan overview for assignees, but not for supervisors or leading roles.

That is why we have created PLANNER AGGREGATOR (PAG).

ADVANTAGES

PAG gets all the Planner data across your M365 environment and puts it in one place to a SharePoint Online List, where you can easily filter and group by trough the data.

TARGET AUDIENCE

Manager or other leading roles, which need overview of the tasks and plans across the company.

TECHNOLOGY

SharePoint Online, Planner, Office Graph, .Net

CUSTOMIZATION

You can customize the look of the data using JSON formatting on the SP list and other options.

HOW TO DEPLOY

We will send you detailed instructions how to deploy this application, but basically all you will have to do is set up a SharePoint List, create few columns and then just create a scheduled task on any machine with internet access, that will run the application.
