Using AI responsibly in healthcare

AI technologies are re-shaping the way organizations across industries do business. Healthcare is no different. Successfully integrating AI into an organization requires industry leaders to practice big-picture thinking that considers not just what AI can do, but what it should do.

At Microsoft, we are collaborating with healthcare customers, partners, and experts to create a collective approach to engaging with AI in a responsible way. As you try to navigate what this shift could mean for the healthcare industry, we’d like to share a few key insights and perspectives that we’ve learned on our journey of building more responsible AI technologies.

A responsible path forward

How do you manage AI responsibly?

Remember, decisions made by healthcare organizations directly impact people’s well-being and livelihoods. For AI to play a role in these decisions, it’s essential that organizations use the technology responsibly and plan for unintended consequences. AI can abide by safety, privacy and compliance regulations as well as foster innovation within the broader healthcare ecosystem. These can include predicting and preventing cyclical disease outbreaks, accelerating research for rare diseases, better health infrastructure planning, and reducing physician burnout.

Risks

- Data privacy and security
  - Personal health information is highly regulated and contains a patient’s most sensitive data
- Data bias
  - Unconscious biases can lead to disparity among population groups while overfitting models may lead to incorrect diagnoses or unforeseen outcomes
- Clinical efficacy of AI models
  - Clinicians should assess models beyond training data sets and develop constant feedback loops with human oversight for continuous monitoring

Opportunities

- Ambient clinical intelligence
  - Implementing data sharing across academia, clinical staff and industry
- Drug discovery
  - Eliminating excessive paperwork to reduce physician burnout
- Population health
  - Accelerating research and development
  - Diagnosing and treating rare diseases

How can you start your own journey to develop responsible AI in healthcare?
