Enterprise-class management for Windows Virtual Desktop from Flexxible IT

Automation and intelligence for Windows Virtual Desktop delivery and management

Flexxible IT is a Windows Virtual Desktop value-add partner that equips enterprises with software that simplifies Windows Virtual Desktop management by automating common processes, allowing you to scale and administer enterprise environments. With crucial information at your fingertips and no need for time-consuming manual processes, Flexxible|SUITE allows you to focus on delivering higher levels of service and maintaining the best user experience.

Windows Virtual Desktop is changing the way virtual desktops are provided by delivering Windows 10 multi-session directly through Azure. Additionally, Windows Virtual Desktop enables you to provide Windows 7 virtual desktops to users as well as the option to bring existing Remote Desktop Services and Windows Server desktops and applications, all managed from a unified experience on Azure.
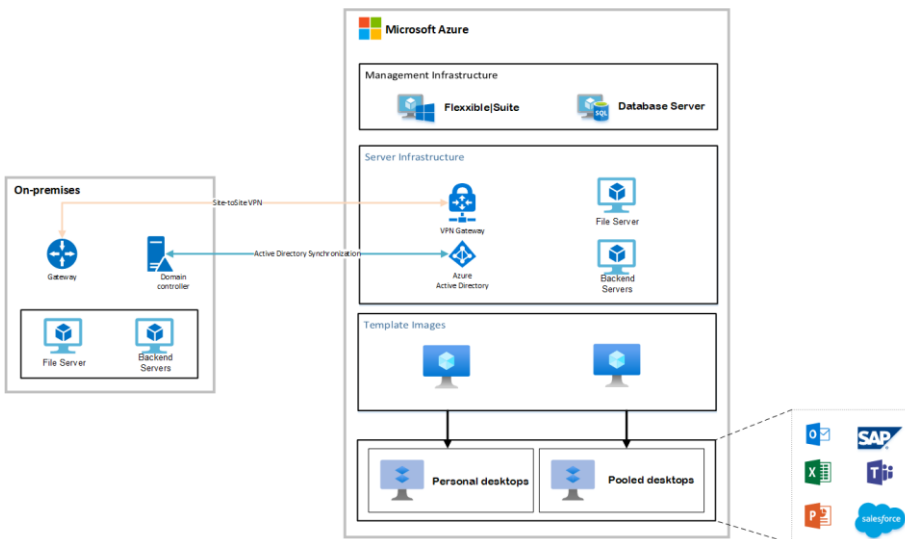

To take advantage of all the options Windows Virtual Desktop has to offer and ensure you're providing a great end-user experience, automatic and intelligent delivery and management are key. Flexxible|SUITE offers a single pane-of-glass management and delivery platform for Windows Virtual Desktop that brings improved control and visibility to digital workspaces.

Through automation of common processes, and self-service capabilities, the solution simplifies deployment, administration, and help desk support of digital workspace infrastructure. SUITE delivers a quality user experience with levels of control and visibility that drive efficiency and positive-return on investment.

> The partnership between Microsoft and Flexxible IT further strengthens the value of Windows Virtual Desktop. With this effective solution, organizations can scale their desktops on demand through a single management console to deliver quality user experiences.

## Flexxible IT and Windows Virtual Desktop integration

How it works

Flexxible|SUITE for Windows Virtual Desktop is installed on one or two Azure virtual machines, depending on availability. Once the solution has deployed on the end user's Azure subscription, IT admins are able to administer all the virtual machines, Active Directory, and Windows Virtual Desktop. SUITE gives the user visibility into the resources hosted in Windows Virtual Desktop and Azure, as well as metrics in the environment. By incorporating auto-growth, SUITE optimizes the end user's environment by creating or eliminating resources on a need- and usage-basis.

Flexxible|SUITE with Windows Virtual Desktop

Scalable desktop deployment

Respond to service demands with scalable and automated desktop deployment done seamlessly through the unified management console.

Extensive monitoring and reporting

User and session analysis ensure you know the health of your Windows Virtual Desktop environment. System thresholds can be configured to alert admins to ensure you deliver and maintain a quality user experience.

Secure management with delegation

Roles with token-based security determine the access to every possible action with enhanced security, allowing you to manage your environment in line with your organizational structure.

The benefits of using Flexxible|SUITE with Windows Virtual Desktop

Simplified management

Through automation of common processes and self-service capabilities, the solution simplifies deployment, administration, and help desk support of digital workspace infrastructure.

Citrix Cloud Virtual Apps and Desktops management integrated with Windows Virtual Desktop

Easily manage Citrix Cloud Virtual Apps and Desktops, as well as Windows Virtual Desktop infrastructure from a single console.

Improved visibility and control

User and session analyses ensure you know the health of your Windows Virtual Desktop environment. System thresholds can be configured to alert IT admins to ensure you deliver and maintain a quality user experience.

Application and image management

Simplify with unified image creation and management of desktop windows and application images. Enable better control and deployment of multiple versions and updates.

Monitor and control Azure costs

Take the guesswork out of understanding and controlling Azure costs, using SUITE's cost-control monitoring and quick-action capabilities.

Scale desktops on demand

Creation of golden image desktop catalogues is simplified and provides a pool of generic and verified desktop environments. User-tailored desktops are built on the fly with Profile Manager and delivered on demand.

About Windows Virtual Desktop

Windows Virtual Desktop offers the best virtual desktop experience delivered on Azure. Windows Virtual Desktop enables organizations to deliver a virtual desktop experience, and remote apps to any device. Microsoft 365, and Azure, together provide users with the only multi-session Windows 10 experience — with exceptional scale and reduced IT costs.

About Flexxible IT

Flexxible IT leads innovation in digital workspace management, and delivery. SmartWorkspaces, a family of cloud services, software, and purpose-built appliances, delivers an intelligent, fast, and simple way to deploy and manage multi-cloud hosted digital workspace infrastructure. Our solutions help organizations fast-track transformation while offering unparalleled experiences for users, and IT.
