SharpCloud

SharpCloud improves the process of building and maintaining strategic roadmaps by structuring and visualising large amounts of complex information. SharpCloud allows you to continuously align business functions with corporate strategy and project precision into the future.

Strategy and Roadmapping

Build live visual roadmaps. Move from static slides and lists to visual and automatically updating roadmaps which demonstrate the relationships between projects, keeping content alive and useful after workshops end. Run effective workshops around data-rich dynamic roadmaps which build credibility and consensus.

SharpCloud is different to your line of business (LoB) tools, it sits across the business; across data, people and processes. SharpCloud complements your current LoB tools and can uniquely show connections and interdependencies across the business. Designed for teams and built to deliver enterprise strength solutions.

Why choose SharpCloud?

Dynamic insights exposed
SharpCloud connects people, data and processes creating dynamic threads across the business, revealing how elements of your business portfolio interconnect and valuable new insights that can be analysed in real-time.

Visible relationships
The ability to report time and relationship across portfolios and identify key trends enables stakeholders to visualise complex data more easily and see the entire business picture at a glance.

Data driven visualization
Changes are automatically reflected to all stakeholders. Data updates are fed into pre-figured dynamic views within your roadmap templates, without losing historical data.

Silo busting
SharpCloud will break down traditional silos, helping to transform and deliver your digital strategy and enabling an innovative and collaborative culture.

Portfolio dashboard
The ability to roll-up project level stories to a portfolio level, to enable stakeholders to see the big picture. Centralising all information, documentation and knowledge about a process or project in one place, creates a 'single source of truth'.

Master templates
Standardising views and attributes across your portfolio to ensure consistency and efficient reuse of both data and metadata, reducing human error.

Easy to deploy, secure and integrate
Up and running instantly with SharpCloud on Microsoft Azure public or private cloud or host on-premise. Integrates easily with your current IT infrastructure.

Benefits of using SharpCloud

Enterprise transparency
Gathering, connecting and communicating complex data and information via a platform accessible to all, ensures the business strategy and portfolio is fully transparent to all employees and stakeholders.

Real time strategic planning – continuous foresight
Continually explore shifting priorities, risks, relationships, ROI and progress across the entire roadmap and analyse the effect of change in real time.

Dynamic data
Continuously gain new insight through real time automated data. Flexible interactive views provide unique perspectives on your data and stimulate productive conversations across your business teams

High level insight
SharpCloud ensures a clear view of how elements of your business portfolio interconnect and their progression in time, in context with your strategy, projects and roadmaps.

Collaboration on complex evolving work
Bring all data and collaborators together in a shared digital space and work together to create a story and unlock new insight in a culture of cooperation and continuous strategy development.

Keep the knowledge alive
SharpCloud keeps the conversation alive post workshop, and ideas transparent and evolving. Knowledge transfer occurs naturally and regularly, progressing business. No more dead documents.

Visual and engaging
Engage multiple stakeholders with dynamic, interactive presentations, from any device and have real time critical conversations.
