Improve patient safety, clinical reimbursement accuracy, and enhance patient care with Alcidion's Miya Platform – an open and mobile EMR solution that leverages AI and machine learning to drive clinical efficiencies, grow revenues, and dramatically lower HACs (Hospital Acquired Complications).

Delivering the highest quality care whilst being correctly compensated for it, is no easy task for Private Hospitals. Limited access to patient data makes it difficult to understand and document patient complexity, a significant factor which impacts patient safety and hospital reimbursement. The Miya Platform maximises your existing data sources using artificial intelligence and machine learning to:

- Reduce revenue leakage
- Increase clinical coding effectiveness
- Minimise gaps in clinical documentation
- Improve patient safety
- Maximise clinical staff efficiency

Drive efficiencies in clinical documentation

Provide real-time data to clinicians to confirm conditions via the Miya Ward Round App without impacting their schedule. This mobile application provides live patient information to a smartphone or tablet which a clinician or other member of staff can read, understand and confirm underlying patient complexity and update diagnosis or treatment as it happens.

An enhanced level of patient care

Miya allows a Hospital to deliver a higher standard of patient care by surfacing the individual complexity of each patient. This information allows the hospital to automate best practice treatment, to plan and manage resources, and reduce waiting times; all of which and minimise the risk of adverse events taking place.

Reduce revenue leakage and the risk of claw back

Capture the end to end patient treatment lifecycle and link to billing processes to reduce revenue queries and claw backs. Clinicians can confirm conditions in real-time, using the Ward Round App which documents significant issues as they happen, to reducing coding queries, enhancing care team collaboration, and creating a comprehensive clinical documentation trail.

Why Miya?

- An Enterprise Health Informatics Platform.
- Integrate and leverage clinical data.
- Real-time metrics including user configurable dashboards.
- An open, mobile EMR without the massive cost.
- Detect and monitor risk and safety in real time.
- Predict patient level risks and flow using AI.
- Speciality specific views on mobile devices.

By leveraging Miya's workflows, artificial intelligence, and integration capability, Hospitals can accurately document, treat, and bill patients compliantly, and in real-time, to ensure best practice care is delivered and appropriate reimbursement is received.

To find out more about how Miya can help to improve reimbursement and enhance patient care for your Hospital visit miya.acldion.com or call 1 800 767 873.
