CoronaPass will enable people and organizations around the globe to resume normal life before a vaccine for COVID-19 is found.

CoronaPass will enable people and organizations around the globe to resume normal life before a vaccine for COVID-19 is found.

Until a vaccine is created, approved and administered at a scale the world has never seen, the resumption of social and economic activity will be dependent on our ability to accurately identify who has built up immunity to COVID-19. This is also essential to restore peace of mind for those that are the most vulnerable.

Introducing CoronaPass

With CoronaPass we can certify people are immune to the virus and are free to return to their normal routine. This will dramatically reduce the economic and psychological impact of isolation and social distancing measures, without meaningfully increasing the risk for the population that haven’t contracted the virus.

This solution enables users to apply for a pass using their serological test results, demonstrating they have the IgM-IgG (eg Corona virus) antibodies. Following the test and approvals, they receive a CoronaPass QR code that can be stored on mobile devices (similar to downloading a boarding pass) and presented for validation to the authorities when necessary. CoronaPass will, for example, act as a proof point to aid in international travel.

The solution can be implemented in days. It is scalable, robust and secure – based on our market leading intelligent process automation platform.

How it works

After a serological test, users can provide evidence of their test result through an application form on their computer or mobile device, which is then sent for validation or approval by the relevant healthcare authority, checking against their existing patient data. Once approved, the CoronaPass can then be sent to the individual via email or to access via the mobile app.

About Bizagi

Bizagi empowers people to drive digital transformation. Bizagi does this by delivering an engaging, consumer-friendly, process automation platform that connects people, applications, devices and information.

Fueled by a community of over 1 million downloads, over 1,000 enterprise customers, and the best pricing model on the market - it’s no wonder Bizagi has enterprise customers across the globe. Organizations including adidas, Deutsche Post DHL and Citizens Bank leverage Bizagi which has been recognized by industry analyst firms such as Gartner, Forrester Research and IDC as a leading platform for Intelligent Process Automation.
