PROGRESSUS IS PSA & ERP ALL-IN-ONE

Progressus is an industry extension of Dynamics 365 Business Central for project based businesses. An all-in-one solution, adding advanced project and Resource management to the basic functionality of Dynamics 365 Business Central.

POWERPACK for Progressus is an extension of Progressus PSA, empowering people and business processes by adding advanced functionality in selected areas.

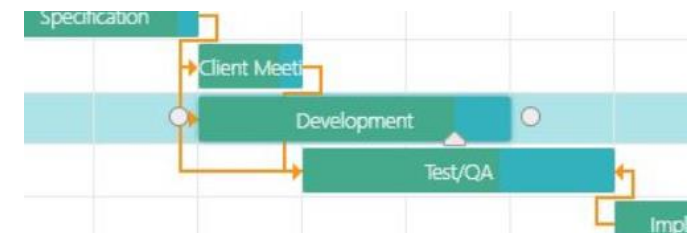

OUTLOOK TIME ENTRY enables the user to do time entry in Outlook email and calendar, prevents work from being forgotten or missed. Done on a regular basis, it rewards a structured way of working, making it possible to review and submit a timesheet in less than a minute.

OUTLOOK CALENDAR PLANNING enables access to (non-private) calendar bookings to provide a full overview and insight of workload and availability. In connection with project budgeting and planning, bookings can be sent to individual Outlook calendars.

SUPPLY CHAIN INTEGRATION utilizes the full potential of the D365 Business Central replenishment functionality for Purchase, Assembly, and Production Order with any project demand. Linking back to Project and Task, it supports the process of planning and ordering items for the project.
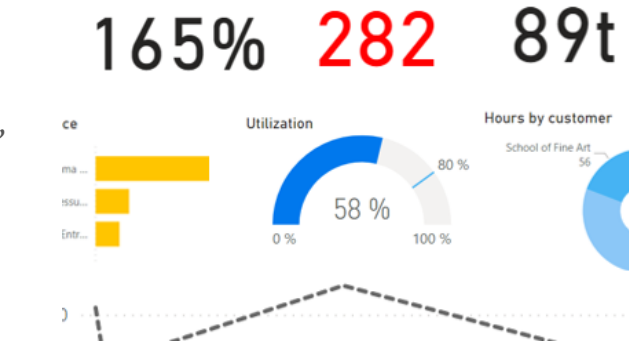

GANTT CHART enables graphical planning of project tasks with drag-and-drop functionality and color visualisation for usage vs budget.

POWER BI REPORT PACKAGE, a complete data model for Progressus with standard reporting package for *Projects*, *Resources*, and *Overall Business*. What you need before making your Power BI solution tailored to your business's unique requirements and needs.

JET REPORTS REPORT PACKAGE, a set of standard reports for Progressus PSA for fast and flexible financial and business reporting inside of Excel. Jet Report is an add-on that requires separate licensing.

SUBSCRIPTION ORDER manage your agreement with a customer to sell certain products or services on a schedule. The subscription order can contain multiple products or services with different quantities, prices, and schedules.

RESOURCE SCHEDULING, planned to be released in Q1 2020, enables resource scheduling with graphical interface and drag-and-drop functionality.

ENHANCEMENTPACK adds enhanced functionality in selected areas such as

WIP Split enables calculated WIP for fixed price to split per usage entry instead of a total value.

Modern Timesheet, providing a dynamic timesheet with graphical chart and color visualisation where attention is required.

Resource Matrix Overviews, providing quick access and insight into selected areas such as *Timesheet Status* and *Workload & Availability*.

The overviews are presented in a matrix format with color visualisation and alerts where attention is required together with drill-down functionality.
