

Redstor Backup and Archiving – Including Microsoft 365

Redstor provides the ability to discover, manage and protect all of your data, including data stored in Microsoft 365 applications. Using Redstor's policy-driven, cloud-based data management solution, users can backup, recover, archive and search all data through a single control centre, improving recovery times and compliance obligations, whilst reducing management overhead.

Ideal for Microsoft Customers

- Fully supports Microsoft 365 including Mail, OneDrive, SharePoint and Teams
- Backup and recover to and from Azure/Microsoft 365

Simple, transparent pricing

- OPEX friendly pricing
- No hardware commitments upfront
- Pay as you grow

Easily evidence compliance

- Redstor allows users to search across all data sets with actionable insights
- Audit trails on deleted data
- Enhance your ability to successfully complete subject access requests

Simple to deploy and manage

- Ease of deployment – setup in 15 minutes
- Single control centre for simplified management

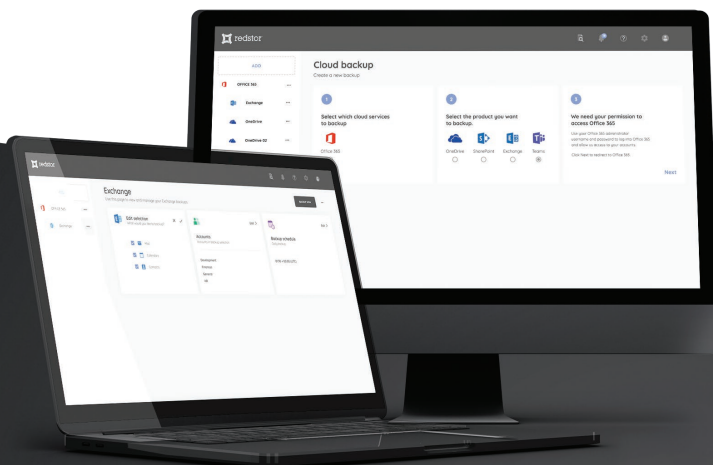

Cloud-first, by design

- Cloud-first approach provides infinite scalability
- No hardware, no licences, just pay as your data grows
- Free on-prem copy of your data if required

Instant Recoveries

- Redstor's pioneering InstantData™ enable users to live-stream the data they need from backups and archives in an instant
- Dramatically reduce RTOs
- Unlimited free test restores to enhance DR testing capability

The defacto backup and archiving platform for Microsoft customers
