iPaaS Plug-and-Play Integration Blocks

NEUDESIC
an IBM Company

Seamlessly Integrate Applications, Data, and Processes for Your Enterprise

Build Enterprise Application Integration (EAI) or Application-to-Application (A2A) Integration using Neudesic's iPaaS Plug-and-Play Integration Blocks. The framework uses microservice logic app blocks to create an integration flow. The Azure iPaaS solution also provides a business transaction dashboard for easy transaction tracking.

Key Features

★ 25 different logic app microservices blocks such as Receive, Validate, Enrich, Transform, Send, and many more adhering to integration best practices

★ Build for configurable EAI/A2A transaction flows

★ Container-based deployment

★ Common protocols and message formats supported

★ Success & failure ratio for business transactions and workflows through custom Azure dashboard

★ Transaction reports based on business domain and interface name

★ End-to-end tracking and visibility for any business transaction

★ Failed transactions report with cause of failure

Benefits

Faster time to production with quick build of your EAI/A2A integration flows

Extendable solution framework

User-friendly dashboard for business users

Decrease on IT team dependency by minimizing service requests

End-to-end transaction lifecycle tracking

Cloud Agnostic

Built on Azure iPaaS

- Logic Apps
- Function Apps
- Service Bus
- Storage Account

- Log Analytics
- App Insights
- Key Vault
- Azure Dashboard
