

VELOTIX

Data Orchestration Platform

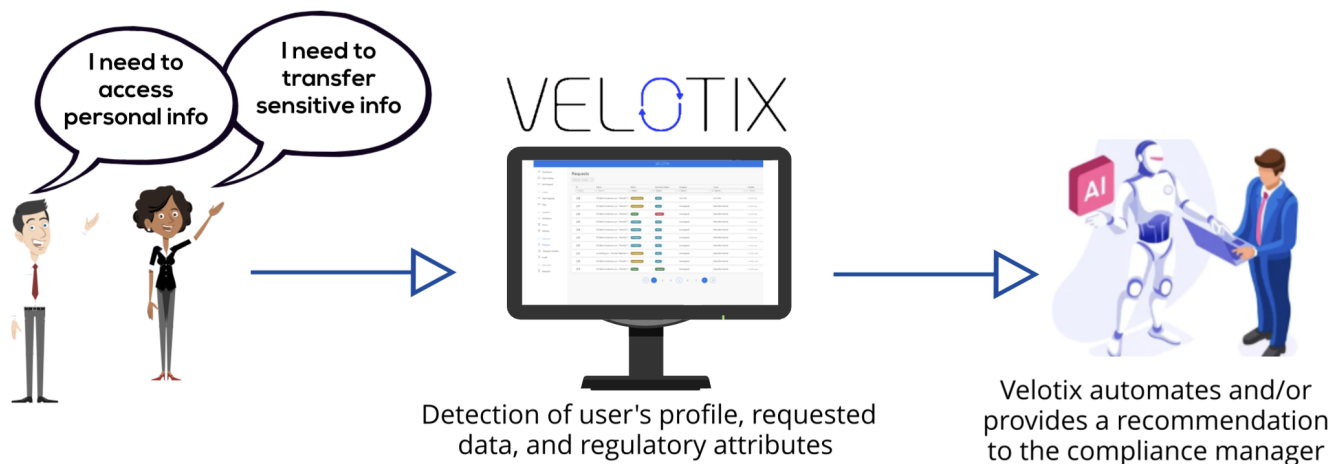

The Problem

Every organization in today's world collects digital data.

The use and sharing of this data expose organizations to regulatory and **privacy violations** and **business risks**. Users cannot **efficiently** access data while staying compliant to regulations and policies.

The Solution

The Velotix platform orchestrates the data and mitigates the risk of the organization. Data becomes usable and compliant with regulations / policies while enhancing business performance and operational efficiency.

Synchronize between multiple data lakes and formats

Support data multiverse (raw data, data fabric, visualization level, etc.)

Decrease in regulatory risk and penalties

Increase in speed and business efficiency & reduced manual work

Key Benefits

- Universal dynamic & efficient data access control
- Reducing the risk of regulatory exposure by enabling control of data security, privacy, and compliance
- Automating & optimizing policy enforcement by applying ML / AI methods
- End-to-end auditing and reporting capabilities
- Cloud and on-premise agnostic

Competitive Edge

Cybernetic Symbolic AI (IP) to build an universal policy catalog

Data access use case editor (no-code)

Dynamic policy builder and enforcement
