

CLOUD MOVE

MODERNIZE YOUR EXISTING APPLICATIONS AND MIGRATE THEM TO THE CLOUD WITH THE HELP OF MICROSOFT.

With a migration to the cloud you minimize the operational risks and lay the foundation for the successful implementation of your digitization strategy!

MINIMIZE RISKS

REDUCE COSTS

INCREASE RELIABILITY

Thanks to the Azure Migration und Modernization Programs (AMMP), you have the opportunity through your Microsoft partner, to benefit from various support and skilling offers that we tailored to you together with Microsoft.

Our experience has shown that the journey to the cloud basically consists of five steps:

Preparation

Based on your digitization strategy, you define what you want to achieve with the cloud move, which stakeholders you want to get on board and which Microsoft partner you want to work with.

Discover

In the first step, we analyze the existing application landscape together with you. For each application, we carry out a brief assessment of the risks and profitability based on your cloud strategy.

Get Ready

In the second step, we ensure that your IT can build up the necessary skills and provide best practice examples.

Migrate

The task now is to gradually bring the existing workloads to the cloud. Depending on the application, this can be done by migrating existing applications into containers or by simply virtualizing existing servers. After this step you are already free of your first worries and can assume that the operation is guaranteed without major failures.

Innovate

Take advantage of the cloud with its countless services. Modernize your applications and actively support your digitization strategy. How about expanding your existing website with inbound marketing mechanisms to get to know your customers better? Or connect your solutions with the help of Azure Integration Services and thus create real added value on investments already made!
