

Power Platform CoE Assessment

Infosys's approach to define Power Platform CoE by leveraging Infosys' three step ACE Starter Program

Enterprises are witnessing a strange "confluences" on innovation cycles, going forward Low Code Application Development Platform will lead Innovation charter in an enterprise. Lack of playbooks for usage of LCAP, Governance First approach & Growth of LCAP platform through Citizen development – has resulted the need to perform readiness assessment prior to setting up Power Platform CoE.

PP CoE assessment consists of four phases – current state review, conduct interviews, define CoE & finalize CoE construct post review. This comprehensive assessment ensures that PP CoE follows organization's existing IT controls and security standards while fundamentals of Low Code application development are factored in. This assessment also defines CoE operating model best fit organization's strategic goals and destinations.

- Produces complete guide for PP CoE implementation in form of CoE handbook.
- Defines CoE operating model enabling federated development.
- Adoption of Governance first and Build next approach
