

Infosys Power Platform CoE Assessment

Infosys[®]
Navigate your next

Infosys's approach to define Power Platform CoE by leveraging Infosys' three step ACE Starter Program

Challenges

- Lack of Playbooks for usage of LCNC to ensure it's used appropriately and does not lead to mushrooming of unmanageable apps.
- Governance, Operations and Monitoring services required to ensure scale, adoption and consolidation are done in a structured way to democratize app development by citizen developers.
- Citizen development and collaboration are key to the growth and adoption of Power Platform.

Ideal Solution

- Comprehensive assessment of CoE readiness would help creating developer playbook for both IT and Business users.
- CoE assessment consulting service helps to design Power Platform CoE after careful consideration of enterprise architecture, security, IT controls & organization's operating model.
- consulting service helps to curate a training plan for enterprises with train first and build next mindset.

Desired Outcomes

- Balance autonomy & accountability through clear ownership of roles.
- Ensure consistent governance process and controls.
- Deliver solutions & services with speed and agility at competitive cost
- Allow collaboration and leverage latest tools and technologies.
- Maintain the integrity and availability of the platform environment aligned to IT standards and policies.
