

DATA GOVERNANCE AND MIGRATION WORKSHOP & ASSESSMENT

Know Where Your Data is Stored, Classified, Managed, & Tracked

Maintaining control over data is becoming increasingly difficult. Most organizations have over a dozen possible locations for their users to store data, including many in the Microsoft Cloud. The Cloud brings new challenges in governance, but also makes it easier to adopt new technologies that can ultimately simplify and improve governance. Interlink can help navigate where to store your data and which technology is best for your organization.

Protecting your data and organization requires strong governance, increased visibility, and a holistic understanding of your data. Know where your data is stored, how it is classified, managed, and tracked.

What the assessment includes:

Interlink will assess your organization's data to understand business requirements to determine the best options for data locations in a proposed migration solution. You'll receive best-practice recommendations for security, classification, storage locations, data protection, and life cycle management. Our team will use the information gathered in the workshop to define a migration plan that meets the long-term goals of your organization.

Attending this engagement will provide you with:

Data Governance Workshop

A data governance framework leveraging Microsoft Purview Information Protection tools created to support the migration that is extensible to apply to other organizational resources.

Data Governance and Migration Assessment

Assessing your organizational data using the Microsoft Purview Information Protection scanner, activity explorer, and other tools for migration to the Microsoft Cloud with integrated information security — whether that is from a recent acquisition or from legacy platforms.

Gold Windows and Devices

Objectives of the workshop include:

A half-day Data Governance workshop and planning session focused on:

- ✓ Business and regulatory drivers
- ✓ Security considerations for data governance
- ✓ Data classification
- ✓ Data storage locations
- ✓ Governance technologies and concepts
- ✓ Advantages and disadvantages of various storage locations

Data Governance and Migration Assessment:

- ✓ Assess and document current primary file storage locations
- ✓ Build document taxonomy
- ✓ Build classification definitions
- ✓ Build implementation plan
Data migration/optimization, classification build-out plan, security configuration, and licensing plans, options and bundles.

Licensing

Customers currently licensed for Enterprise Mobility + Security E3, Office E3, or Microsoft 365 E3 are eligible to purchase or try the Microsoft 365 E5 Compliance suite. Microsoft 365 E5 Compliance capabilities and features are included in the Microsoft 365 E5 license.
