Inviso is a trusted Gold Microsoft Partner

Our experts offer unparalleled Microsoft product knowledge, extensive experience with modern platform technologies, deep business analytics expertise, and innovative solutions.

Gold
Microsoft Partner

Expertise

We're concentrated on Microsoft-based technologies. We like to leverage the latest and greatest Azure-based tools and services. However, we start every engagement with an infrastructure assessment and always defer to the most cost-conscious technology and licensing options that make sense for you. We leverage existing tools such as the Microsoft Power Platform to deliver low/no-code solutions. When existing tools don't meet your needs, we have expertise in the full Microsoft BI stack and are fluent in a wide variety of coding languages enabling us to deliver fully customized solutions. Our Analysts go beyond capturing requirements and delivering solutions according to spec. We collaborate closely with business stakeholders throughout each project to ensure that everything we deliver includes meaningful business value and measurable ROI. In addition to our technical expertise we have an incredibly talented Creative team capable of designing beautiful and thoughtful user experiences.

Process

We're interested in developing mutually beneficial partnerships and toward that end we're happy to work with you for a while free of charge to establish trust and demonstrate our value. We recommend an initial 30-minute introduction meeting followed by an assessment period during which time we can evaluate your current reporting infrastructure, advise on best practices, and/or build out a Proof of Concept before providing a proposal for a paid engagement.

Engagement Model

All our consultants are trained in both Agile and Waterfall methodologies. We are very flexible in how we engage and always strive to define a model that works best for each client. We're happy to provide ad-hoc services as needed or work within your project management framework. We're also happy to make a recommendation after our initial assessment based on your needs. We take on projects of all sizes including ad-hoc consulting hours to help you overcome a specific hurdle, integrating with your team to increase bandwidth or consult on best practices, and putting together large teams to deliver enterprise-scale solutions.
