

## REMOTE BIOMETRIC DIGITAL AUTHENTICATION AND AUTOMATED ON-BOARDING TECHNOLOGY

**iiDENTIFii** is a **world leading** remote biometric digital authentication and automated on-boarding technology platform. It fulfils the needs of **customer-focused** organizations that are required to authenticate and on-board customers. It makes use of a **frictionless** and non-invasive automated proven process, that meets customer **intelligence, risk** and **compliance** goals, as well as ticking all the boxes from a **governance** and **legislative** perspective.

This “game-changing” technology has already been extensively **tried, stress-tested at scale,** and **approved** by a number of prominent South African Banks and other registered financial institutions and has also been accepted as **legally compliant** by **ENSAfrica** (The largest law firm in Africa). It has been reviewed and **assured technologically** by **PWC** (The highest globally ranked Audit & Assurance firm).

A **key feature** of the technology is that it can be **integrated** into any **mobile platform** by means of a robust Software Development Kit (**SDK**), providing the ability to **customise** its functionality according to each institution’s specific requirements, in a **seamless** and **cost-effective** manner.

**iiDENTIFii** has a **bona fide** application in many industries including Financial Services, Online Education, Health Services, and Payment Solutions.

**At the core of all of these is the verification of an immutable critical variable - IDENTITY.**

### Current live applications of our iiDENTIFii platform:

- **Proof of Liveness**
  - **True** biometric liveness, enabling strong authentication, **far outperforming** gesture-based & parallax technologies
- **Facial Recognition**
  - Facial algorithms **specifically tailored** according to the respective ethnic groups
  - **Proven** on massive data sets, at optimal ‘false accept’ and ‘false reject’ rates, that comply with the Banking sector
- **Identity Document**
  - **Automated** verification
  - **Barcode** capture
  - **Data** extraction
- **Data and Biometric Verification**
  - **Triangulation** with the respective Government issuing authority.
- **Blockchain Platform**
  - Encryption and storage **on request.**

### iiDENTIFii DELIVERS:

- **Complete** frictionless customer on-boarding in **under 30 seconds**
- **Robust** facial recognition and liveness detection
- **Authentication** of identity documents
- On-boarding fraud **detection**
- A stand-alone application or a white labelled **SDK**
- **Compliance** with FICA, KYC, RICA and AML regulations.
