Sentinel Health Check

Positioning

Azure Sentinel Health Check

A review of your existing Sentinel configurations to identify opportunities to improve its performance.

Identifying business goals and stakeholder requirements to develop an action plan.

Benefits

Optimise security operations

This service will provide a detailed view on how to improve performance efficiency of your Sentinel application.

Deliverables

An action plan detailing the analysis findings and recommendations derived from them.

Walkthrough with key business stakeholders.

Summary of works

Requirement gathering workshops

Organisational – what were the drivers and expected value from Sentinel

Design – uncover the context to the deployment and understand the reference designs

Operational – what issues are you currently experiencing and what are the incident management processes

Action plan

An action plan based on findings and recommendations derived from them. The action plan will be prioritised and colour-coded to highlight their value and potential impact against your objectives and best practice.

A gap analysis will be conducted to identify areas where Cloud Direct can provide additional benefits to further improve the performance of Sentinel.

Sentinel platform configuration analysis

We will review the existing Sentinel deployment from a platform perspective. Entity behaviour, analytic data sources and configurations will be assessed in-line with best practice.

Solution stakeholder walkthrough

A walk through of the analysis, requirements and proposed solution with stakeholders.

Helping all parties understand the findings and recommendations to help inform a business decision on next steps.

Component analysis

An analysis of the components within your Sentinel platform will be run. We will assess how they affect your current operations to determine specific recommendations for optimisation and improvement.
