App Modernization with Azure AKS Assessment managed by BlueSoft

Bring your company into the future

Accelerate application modernization and development, and build with BlueSoft intelligent apps on Azure using Kubernetes.

We are witnessing a Cloud-Native Revolution. More companies migrate to the cloud because of the increasing demand for better scalability and reliability. The truth is that becoming an actual cloud-native organization requires many new skills and technologies. Modernization and migration of current applications to Azure using Kubernetes is the right step to develop your company and provide speed, scale, and flexibility at the highest level.

During the assessment, BlueSoft will advise you on the best approach and choice of solutions and support you in each step of the way.

Why BlueSoft?

Our experienced team has a Microsoft Azure Advisors Group member, an MVP, certified architects, developers, and DevOps professionals..

We have delivered many successful infrastructure migrations to the cloud in different industries. That proves that nothing can stop us, and we will always find a way to choose the best approach aligned to the organization's growth requirements.

What does the assessment look like?

1 First, we will arrange a meeting to discuss the business needs, lay out the scope of the engagements, and set the timeline and deliverables for the assessment period.

2 Then we will collect data about the identified application, assess the current infrastructure, and define our goals and priorities to meet the business needs.

3 Ultimately, we will finalize and present the application modernization roadmap with specific steps, technology stack and showcase how AKS can be optimized to reap the benefits cost wise and securty wise.
