

# Supercharge your Sage with Microsoft Azure

## AZURE SOLUTION BUILDER PROFILE

### Turrito Networks

Turrito Networks was founded on the principle of making our customers feel special. With Sage on Azure we're able to leverage our cloud expertise to move Sage's award-winning financial software to Microsoft's award-winning cloud platform. The benefits are numerous and help our customers thrive during these challenging times.

## WHAT WE OFFER

Sage on Azure provides Sage's award-winning accounting software from Microsoft's Azure cloud. Accessible from anywhere and backed by Azure's reliability, Sage on Azure is the easiest and most secure way to manage your business's finances.

Sage on Azure gets all the traditional benefits of Microsoft's Azure cloud, like guaranteed uptime, the ability to scale as needed at the click of a few buttons, and performance boosts for those busy times of the month.

Being able to run on multiple devices makes accessing and using Sage on Azure incredibly convenient, and identity management through Azure Active Directory integration helps with device and user management.

By not needing to own, run, or manage your own on-premises servers running Sage anymore, businesses can lower their costs while improving productivity and maintaining full visibility into their finances at the same time.

## WHAT OUR CUSTOMERS ARE SAYING

*"Perspex had already embraced the Cloud 'vision' before COVID-19 but during the last few months of load shedding and enforced work-from-home policies the Cloud value has skyrocketed. With Turrito's help our business carried on in all digital respects with negligible impact to productivity or security."*

- Adrian Kemp, Director, Perspex SA

Gold Security

Sage on Azure is secure, fast, scalable and, when configured properly, has Disaster Recovery and Compliance built in. Access it from anywhere, on any smart device, and do what you need to knowing that your sensitive data is safe and secure.

## KEY USE CASES

### ANYWHERE ACCESS

The beauty of Sage on Azure is that you can access it from anywhere there is internet connectivity. Access is incredibly secure with a variety of protocols and encryption available.

### SAGE ON ANY DEVICE

Access Sage on Azure on any smart device, whether that's a notebook, a desktop PC, a smartphone, or even a tablet. Take Sage with you wherever you go.

### SINGLE SIGN-ON

Are you managing a fleet of devices? Thanks to Azure Active Directory integration, Sage on Azure conveniently uses single sign-on that unifies identities across devices.

### MULTIPLE VIRTUAL MACHINES

Sage on Azure works optimally when run on multiple virtual machines. This way, redundancy and security are guaranteed, and support and management are easy. Recovery times are also fastest in this configuration.

## WHY SAGE ON AZURE?

### YOU'RE PROTECTED

The internet is full of security threats. Microsoft knows this and makes all the best security features available to Azure users. With these powerful tools, virtual machines, SQL databases, and sensitive customer information can be locked down and kept safe from prying eyes.

### SAVE MONEY

Running Sage on Azure is a lot easier on your pocket than running it on servers you spec'd, procured, built, and installed yourself. Azure takes care of the hardware Sage runs on, backups are easier and faster as everything is hosted in the cloud, and you don't need to do any maintenance or provide hardware support. All of these things cut down on your costs and allow you to focus on what matters most.

### UP YOUR UPTIME

Thanks to the built-in redundancies of the Azure cloud, Sage on Azure boasts availability of 99.95%. Translated into time, that means Sage on Azure *might* not be available for only a little over four hours every year – the rest of the time it's yours to use as you need to.

### WORLD-CLASS SCALABILITY

Sage on Azure can grow comfortably alongside your business. Through the scalability of the cloud, you can add users as you need to, expand storage capacity as your SQL databases grow and more with the click of a few buttons. Azure takes care of the hardware in the background, and all you need to do is tell it what you need.
