

LP+IDAM

CLOUD IDENTITY AND ACCESS MANAGEMENT

LP+ IDAM (Identity and Access Management) is a portal that uses the protocols and systems to ensure users in the cloud (teachers, learners, administrators, other staff) have the correct access and privileges, and single sign-on, to online tools and resources.

LP+ IDAM works by regularly and automatically synchronising school and MoE information and databases, with identity management systems such as **Azure Active Directory**.

FEATURES

- Provides a single portal to manage multiple Office365 tenancies
- IT administrators can manage all users across all AAD tenants.
- User accounts administration (Add, Edit and Delete) is enabled
- Single Sign-On (SSO) is enabled to manage multiple tenants.

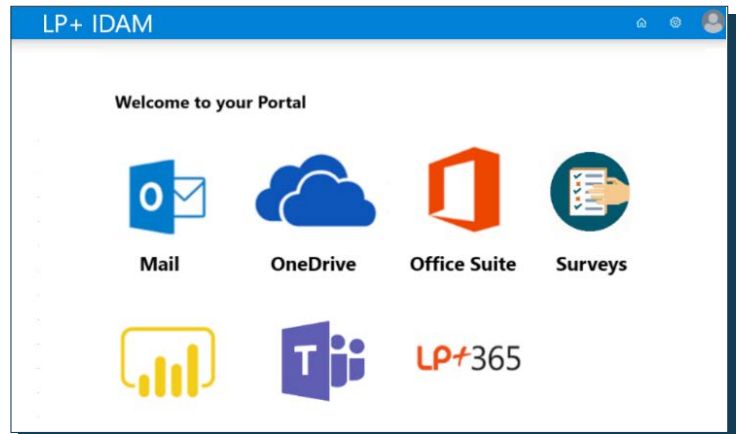

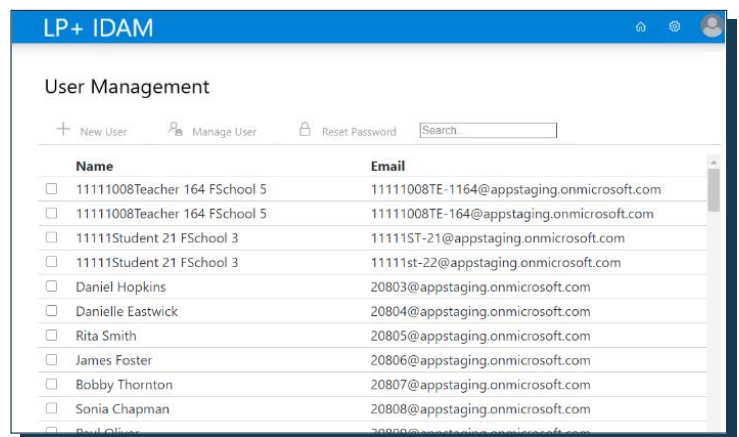

ROLE MANAGEMENT: Roles permit management to be delegated to local or regional administrators. This allows both management of users, and other administration tasks, to be delegated,

USER SCENARIOS: User management features include being able to create new users, edit users, delete users, suspend users and reset passwords.

MULTI-TENANCY MANAGER PORTAL: LP+ IDAM MTMP is a landing page for all school's services on all office 365 tenancies. Users can only view and have access to the apps for which they have permissions with access based on their assigned role.

OUTCOMES:

- Provides an integrated solution with full data sovereignty.
- Designed to work at scale across multiple tenancies covering millions of users. This allows users to move seamlessly between tenancies, and role-based admins to manage full or partial tenancies.
- Ensures the educational eco-system is accessed using a secure Single Sign-On.
- Allows users that reside in multiple tenancies to access applications from a central portal, using Multi-Tenant Manager Portal (MTMP).
- Ensures unique user IDs are created across multiple tenancies for application login, essential for nationwide deployments

Over 25 million teachers and students are currently being managed by LP+IDAM
