WHAT IS WINDOWS VIRTUAL DESKTOP?

Windows Virtual Desktop can be defined as a “born in the cloud” VDI solution, which provides the only Office 365 ProPlus and Microsoft Store App support while using the exclusively built Windows 10 Enterprise multi-session operating system.

WVD offers the possibility to virtualize Desktops and Applications, while delivering a unique integration in your on-premises end-user workloads; security, high availability and the necessary infrastructure are built in by default.

WHY WINDOWS VIRTUAL DESKTOP?

Best in-class User Experience

- Seamless integration
- Connection from any device, optimized for Office 365, Teams & OneDrive

Enhanced Security

- Built-in Azure Security features

Centralized Management of Apps and Desktops

- Governance and Lifecycle Management within Azure

Containerized Profiles and Applications

- FSLogix Profile Containers
- MSIX App Attach

WVD CAPABILITIES

Multi-Session

Windows 10 Multi-Session supports Microsoft Store Apps and full Office365 Pro Plus support. Cost reduction due to the usage of Containerized User Profiles (FSLogix). Customers with existing Microsoft 365 licenses use WVD with no additional cost.

Scaling and Automation

Extend to as much Session Hosts as needed to provide a fast and secure modern workspace and cost-reduction capabilities.

Application provisioning

MSIX app attach revolutionizes the provisioning model of applications. One-touch provisioning and control for any kind of Line-Of-Business App.
