

## SIRIUS CLOUD-GO! FOR AZURE ASSESS - OPTIMIZE - REHOST

Cloud solutions provide a rich set of platforms and ecosystems that—when chosen and implemented effectively—can provide disruptive business advantages. With a dedicated Microsoft Azure team of experienced cloud consultants and technologists who have achieved more than 125 Microsoft certifications, our experts go beyond the technology, also analyzing financial and operational impacts to set you up for success. Sirius provides a comprehensive portfolio of full-service cloud offerings that span the entire life cycle, from plan and design, to operational transition.

Sirius and Microsoft have partnered with Turbonomic and Zerto to innovate a unique, world-class cloud migration and optimization offering that can be customized to meet specific client needs. Sirius IP, together with best-in-class tools, enables us to deliver a simplified and flexible way for organizations to leverage the business optimization benefits of Azure cloud and accelerate facilitation of application modernization. Sirius Cloud-Go! for Azure solutions streamlines your journey to the Azure cloud by implementing a proven, three-phase framework.

**Phase One: Assess** - Inspect workloads and identify those that are ideal for a move to the Azure cloud. The assess phase also determines which tools should be leveraged to optimize the Azure workload architecture, and provides monthly cost estimates for running those workloads in the Azure cloud. The Microsoft Pricing Calculator is employed for assessing more modest workloads, and Turbonomics for workloads with more elaborate architecture.

**Phase Two: Migrate** - Rehost optimized workloads utilizing Azure Site Recovery (ASR) for smaller, less dependent environments, or Zerto for larger, more complex environments and those requiring more sophisticated disaster recovery consideration.

**Phase Three: Manage** - Leverage optional Sirius services to expertly modernize and professionally manage hosted infrastructure and applications.

### WHY SIRIUS?

Sirius is a full-service cloud, hosting and managed services provider committed to helping organizations in their transformational journey from legacy IT to a future state of IT.

Sirius has achieved Microsoft's highest partner level for Cloud Productivity, and as a result is one of a select group of partners to be included in its Gold Partner Program.

Sirius Microsoft Competencies include Gold Cloud Platform, Gold Cloud Productivity and Silver Portals and Collaboration

## SIRIUS CLOUD-GO! FOR AZURE SERVICES

**Azure**, Microsoft's cloud computing platform, provides services that allow for everything from running existing applications on virtual machines and exploring new software models to managing physical assets so you can focus less on infrastructure and more on business operations. Azure's ever-expanding array of products and services span the cloud, are interoperable and open source, and can be utilized at any scale to bring speed, flexibility and simplicity to your cloud strategy.

**Turbonomic** delivers workload estimation and automation for cloud environments by simultaneously optimizing performance, cost, and compliance in real-time. Azure migrations are radically accelerated with fast, dynamic, full environment assessments, precise, consumption-based cloud migration plans, and the ongoing confidence of Turbonomic's intelligent and continuous optimization in Azure. Remove risk and decrease cost with the platform that automates placement, sizing, and provisioning of workloads. Turbonomic continuously analyzes and adjusts IT resources in real-time, to assure application performance, while also maintaining policy compliance at the lowest cost to your business.

**Zerto** is the foremost software solution for effortless, efficient rehosting of applications to Azure cloud. It also offers optional replacement of backup, disaster recovery, and cloud mobility solutions with a single, simple, scalable IT Resilience Platform™. Zerto allows for the simultaneous replication of virtual machines within the same data center, to a remote data center, and to Microsoft Azure with no snapshots or impact on performance, and just mere seconds of data loss. By utilizing Zerto and Microsoft Azure, users can easily create a rehosted and/or disaster recovery environment, migrate on-premises data centers, migrate and protect Linux, SAP and other workloads, and migrate to extend end-of-life for Windows Server 2008/SQL Server 2008 for an additional three years. An optional Zerto capability removes the need to provision and manage your own disaster recovery site, allowing businesses to achieve significant cost savings, while gaining limitless capacity and scalability on demand.

There is no one-size fits all approach when it comes to migrating workloads to the cloud. Sirius is dedicated to helping clients successfully navigate their cloud and modernization transformation journey by innovating game-changing offerings that leverage industry-leading tools from strategic vendors whose technologies help make businesses more successful. Building on that mantra, the offerings in Sirius Cloud-Go! for Azure have been discerningly assembled to provide clients a simplified, robust path to cloud migration that can be tailored to meet specific needs and drive innovation.
