

DevOps Jumpstart

Enable Continuous Delivery of Value to Your End Users

Is your organization struggling with long delivery lead times to get your products and services to market? Do you face a constant struggle between business decision makers and IT to successfully collaborate?

3Cloud's DevOps Jumpstart can help you overcome these hurdles and more through the bridging of software development (Dev) and software operation (Ops).

Our DevOps Jumpstart supports automation and monitoring at all steps of your IT Delivery lifecycle, from application development, integration, data services, testing and releasing, to deployment and infrastructure automation.

Shorter development cycles and increased deployment frequency result in more reliable releases that align with your business objectives. Collaboration is supported with standardized source code repositories for infrastructure and application code, empowering the Dev and Ops teams and the other stakeholders in between to collaborate and solve business challenges effectively and efficiently.

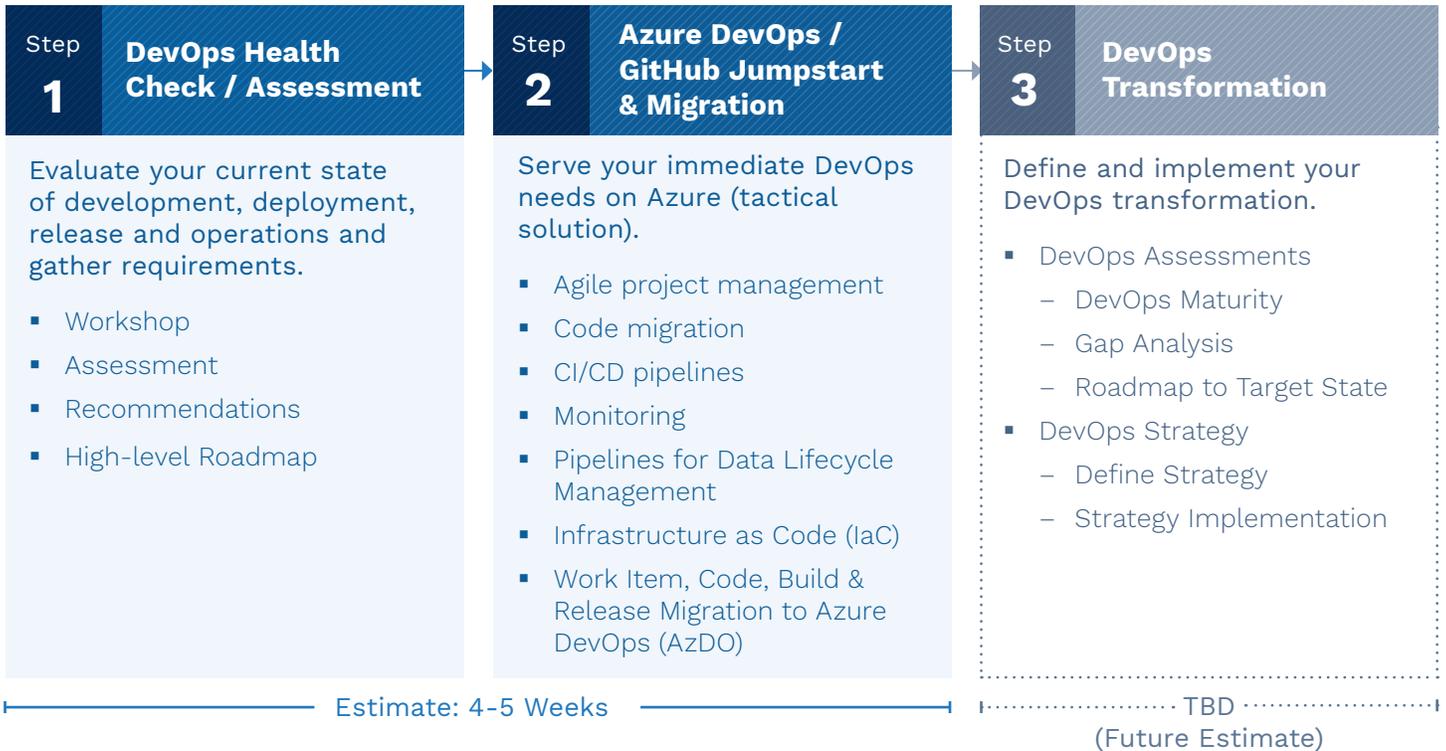

Business Benefits Enabled by DevOps:

- Shorter cycle times and faster delivery of value to market
- Improved quality and availability
- Optimized resources and waste reductions/elimination
- Innovation and great customer experience achieved through experimentation

Let 3Cloud help you move your organization to a DevOps model, modernize your apps and infrastructure, and transform your enterprise.

3Cloud DevOps Jumpstart

How can DevOps help your organization?

Agile Culture

Promote cross-functional collaboration, self-organization, and a value focused culture

Customer Focused

Operate through continuous feedback and learning from user validations

Metrics-Driven Transformation

Assess progress by monitoring the outcomes quantitatively

Continuous Quality Control

Implement an automated delivery pipeline that continuously improves the quality of product as it evolves from inception to realization

Infrastructure & Operations

Enable agile infrastructure delivery via Automation/IaC and effective production management

Security & Risk Controls

Shift security and compliance left in the Continuous Delivery pipeline

End-to-End Process

Facilitate end-to-end traceability and look at the IT Delivery process holistically

Start modernizing your tools, processes and platforms.
