

API Management

Hybrid and multi-cloud management platform for APIs across all environments

Today's most innovative companies are adopting API architectures to streamline their growth. Optimize your work in hybrid and multi-cloud environments with a single place to manage all APIs

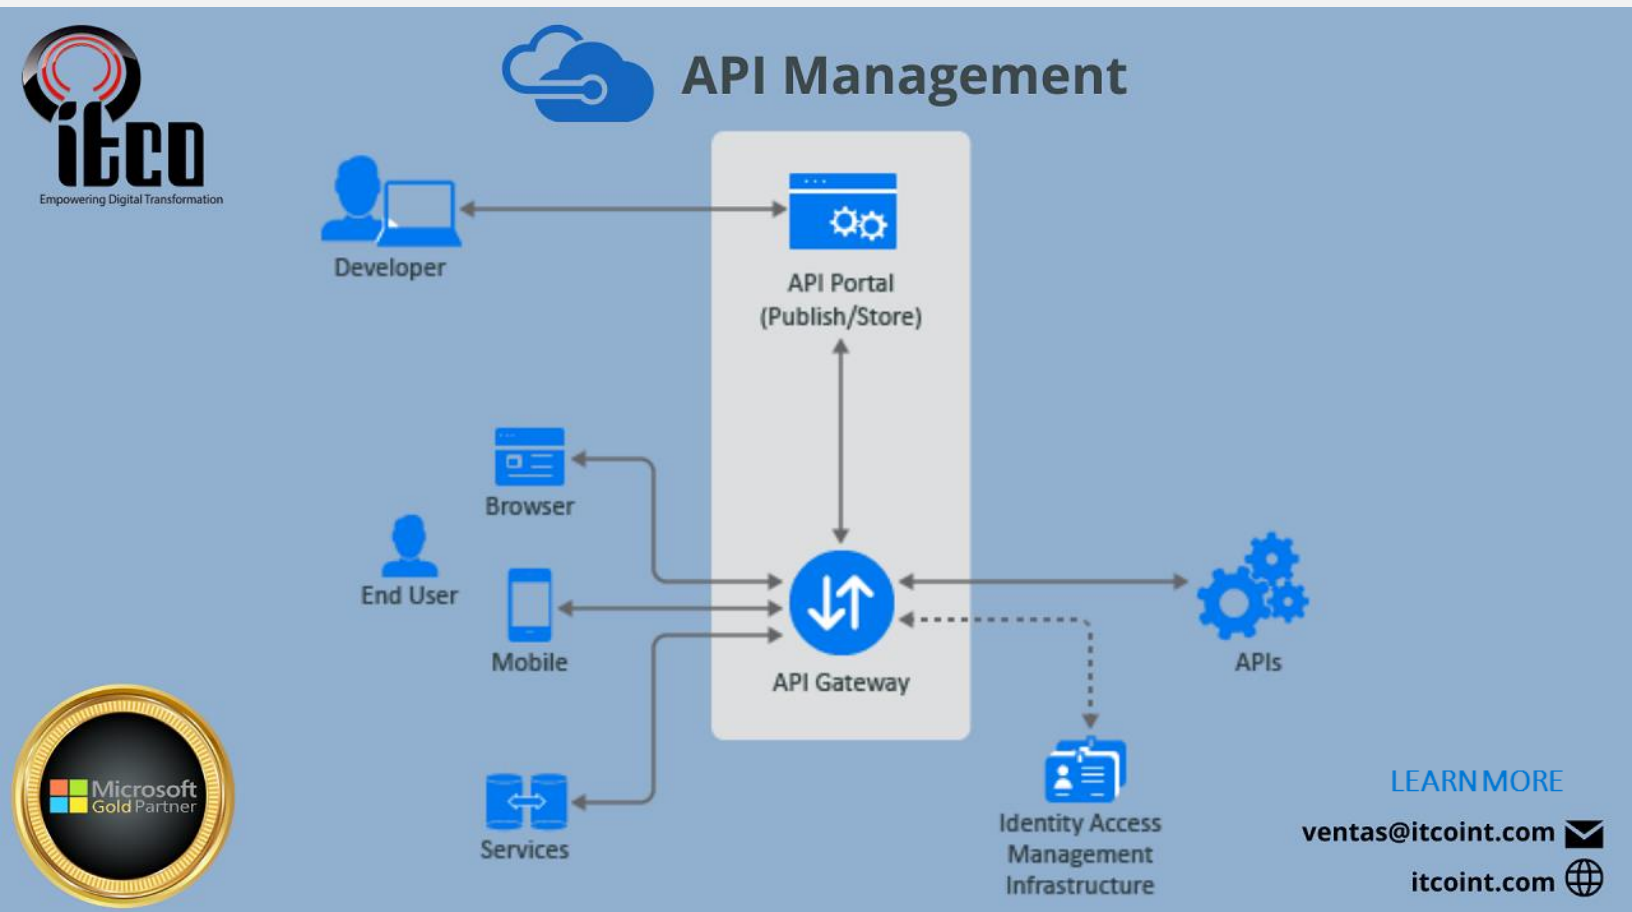

In addition to Azure, you can implement API gateways in parallel with APIs hosted in other clouds and on-premises to optimize API traffic flow. Meet security and regulatory compliance requirements and enjoy a unified management experience and comprehensive observation of all internal and external APIs.

Increase the protection of your resources

Selectively expose data and services to employees, associates, and customers by applying authentication, authorization, and usage limits.

Streamline your business

Build applications faster and immediately deliver value to your customers with methodologies that prioritize APIs. Decouple front-end and back-end teams with API simulation, API revision and version control, and automation of API documentation. See how Wegmans created a new mobile app in less than eight weeks.
