

Azure Migration Services by TTPSC

Transition Technologies PSC Sp. z o.o.

Our **Azure Migration Services** is a reliable and complex solution dedicated to companies that expect more than a standard level of service from their subcontractors. Our specialists will safely guide you through the entire process, starting from staff training, workshops and analysis, through strategy, to migration itself.

HOW WE WORK

Before we begin the migration process, we will thoroughly analyze your environment. Based on the obtained knowledge, we will propose the best available solution. When creating a migration plan, we will consider both technological and business factors.

Our specialists will support you in migrating from:

- > On-premises solutions based on **Linux** or **Windows Server**
- > Migration from other cloud vendors to **Azure**
- > Database migration including **Oracle, MS SQL, MySQL, PostgreSQL**

During migration, we can also expand the possibilities of your environments by taking full advantage of the opportunities offered by the cloud and add functionalities related to Internet of Things or Augmented Reality. The presented cost includes the work of one architect / DevOps during one business day.

We know that nowadays not only reliability and security of infrastructure are important, but you also need to consider:

FLEXIBILITY

the ability to increase and reduce resources as needed

AGILITY

adapting to ever-changing circumstances and allowing a quick response

BUSINESS VALUE

given the return on investment

Depending on the analysis, we will suggest migrating all or part of the environments to Azure. Regardless of whether it will be architecture only in the public cloud or a hybrid solution, we have extensive experience in implementing such solutions for the largest companies in the world.
