

Challenges

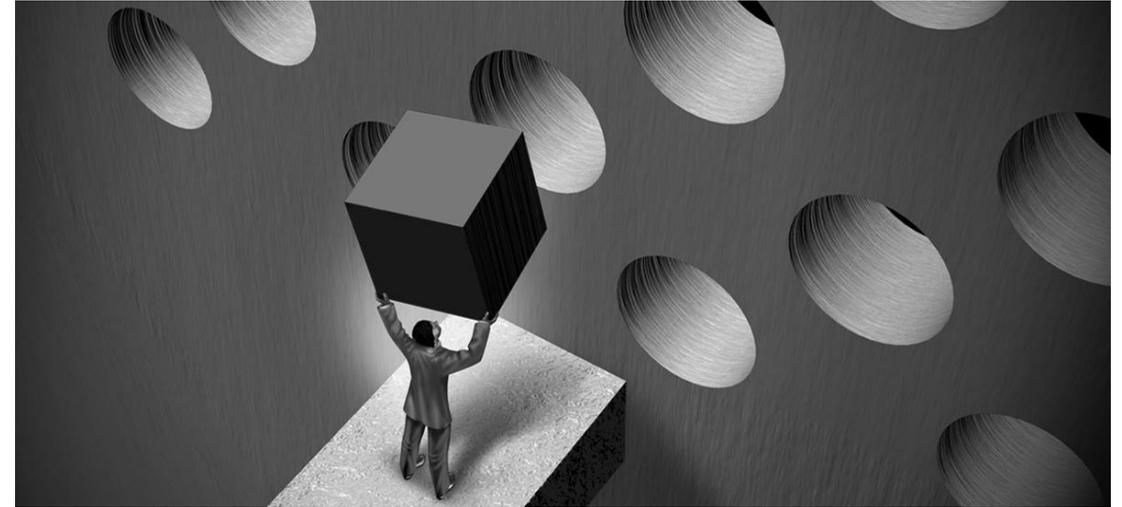

Whether you have started your cloud journey or if you are in the starting blocks - you have probably asked yourself **"How can we perceive and comply with the requirements for continuity and stability, as we have today in our own data center?"** and perhaps your CISO is hanging over your shoulder asking: **"How do we ensure that we meet the security regulations?"**. Followed by the financial department asking: **"What are the economical benefits of moving to the cloud?"**

Is this familiar to you? You are not alone! These are issues we often encounter with our customers. That is why we decided two years ago to create the market's best offer linked to Cloud Governance.

Today 's Challenges with the "Cloud"

- Technology is launched in an extrem pace, which makes it difficult to follow and sort through the noise
- Hard to understanding the control of costs and how they can be kept down, both now and over time
- Ensure that business rules are followed due to that standard cloud services usually do not take security and regulatory requirements into consideration
- Maintain control and make divergence visible from set guidelines
- Applications and systems are seldom designed for 1:1 move/migration

Conclusion:

- Control
- Cost optimization
- Performance optimization
- Meet security requirements
- Mix of innovation, agile development and low time-to-market and regulatory and economic requirements

Cloud Governance

Control, security, and optimization

Take control of your cloud services in terms of compliance and meet regulatory requirements. Ensure compliance with security policies and continuous cost and performance optimization with Advania.

Active management is a prerequisite for ensuring and maintaining a high level of functionality and availability over time across all public cloud services.

The Advania Cloud Governance service ensures that you continuously, and over time, receive a platform delivery that meets the requirements and expectations of your business.

Why Cloud Governance from Advania?

- Management of your Cloud Platform
- Monitoring and reporting of availability, performance, logging, tagging and security
- Cost control reports, metrics based on how well cloud platform services follow set guidelines and improvement recommendations
- Governance, advice and trend analysis

We offer:

- Continuous cost-effectiveness of services in the cloud platform
- Implementation of regulatory requirements frameworks and automatic adaptation of services that do not comply with these
- Ongoing performance optimization for servers, databases and applications
- Becoming your strategic partner

Managed Cloud Services

Different levels of commitment

Cloud Governance for Azure

Baseline for the Azure platform, including:

- Control thru Azure Policies, Infrastructure as Code, Operational procedures and Governance Design
- Continuous cost-effectiveness and performance optimization of services in the cloud platform
- For filling security requirements

PaaS-operations

Enhanced Baseline for specific Azure PaaS-services, including:

- Workload operations
- Monitoring and Alert management
- Design recommendations
- Instruction based incident management

Other Azure Services from Advania

- Managed Azure Virtual Desktop
- Managed API Management
- Managed Cloud Security
- Managed Key Vault
- Managed DevOps
- Hybrid Identity
- Managed Network
