# SharpCloud for Jira

Connect your business strategy to **agile delivery**

Why SharpCloud and Jira?

Organizations are facing an increasing pace of change. Jira, the #1 software development tool used by agile teams globally, combined with SharpCloud, the most flexible visual data-driven management tool, enables better alignment between strategy and delivery of change.

Through our integration with Jira, complexities within the organization are understood and managed, the visualization of progress is maintained, and value is accelerated.

Think outside the workshop

SharpCloud is your virtual meeting room. Start collecting ideas before and after the event from participants all over the world.

Our forms can be accessed by your staff from their personal devices by simply hovering over a QR code and vital information can be added to your project easily, instantly and at any time.

Remote working for complex networks of people

SharpCloud is ideal for your remote working teams to pull together around a set of projects, bringing more efficiency and productivity to current remote working.

- Create better outcomes quicker
- Connect people to plan and purpose
- Achieve agility at scale
- Single source of truth along all business imperatives

More power in SharpCloud

Combining SharpCloud and Jira rather than using a whole toolset, will bring more agility to your business and more insight into your projects.

With a bi-directional connector, you are always able to work alongside Jira. Connect to multiple projects and push the data back to Jira if you wish, bringing transparency, agility and control to your operational and reporting processes.

With SharpCloud you can uniquely:

- View data from multiple dimensions for portfolio analysis
- Visualize dependencies across the portfolio and understand complexity
- Filter data, reduce noise and gain clarity
- Edit data visually and work with multiple data source

Visualize complexity and break it down

SharpCloud for Jira gives you real time visibility on your agile projects and the relationships between them. With full transparency across the portfolio, make more informed decisions.

- Comments made on a project can be seen by all, improving transparency
- Risks and duplicate activities can be identified immediately, saving money
- Visualize and manage cross-team dependencies

Contact us to find out how we can support you in connecting your Jira data to a dynamic, data-driven presentation of your strategy.
