

Azure Proof of Concept: 3-Day Engagement

OVERVIEW

Gain a quick and focused understanding of the benefits that the Microsoft Azure Cloud can bring to your organisation.

This 3-day engagement will provide you with the skills required to connect to and manage your new Azure subscription, and will allow you to map out a high-level plan of action for further developing your Microsoft Azure cloud services

SCOPE OF SERVICE

As part of this engagement, we will work on site directly with your IT team to deliver the below services and guidance:

- Create and log into your new Azure tenant (payment information required)
- Provide a comprehensive overview of the Azure portal
- Examine the Identity and Access Management (IAM) functionality of the Azure Platform
- Create a virtual machine with access restricted to your corporate environment
- Examine cost management and alerting features
- Demonstrate the function of Azure Resource Management (ARM) template
- Introduce the Azure management tools suite (Storage Explorer, AzureCLI, PowerShell)

Additionally, we will work with you to plan your future service migrations to the Azure platform, including a discussion of the service options available for network connectivity between your datacentre and the Microsoft Azure cloud.

Finally, we will provide a comprehensive 'next steps' document, detailing the conclusions of our discussion, and providing a recommended approach for the first stages of your migration to the Microsoft Azure cloud.
