

Application + Data Modernization

to help you realize significant TCO benefits using Hexaware's AMAZE™ platform

Customers spend high cost on database & middleware license and maintenance. Eliminating such high cost, high maintenance databases & middleware and replatforming them to Azure (open-source or Managed Microsoft services) reduces cost significantly by upto 60%.

Hexaware's Solution

Hexaware's AMAZE platform has the capability to replatform such high cost, high maintenance middleware and databases to either open-source platforms or Microsoft services on Azure by leveraging high levels of automation that helps in an accelerated & cost-effective assessment & migration to the cloud.

Value to the Customers

- High TCO savings by upto 60%
- Upto 50% faster assessment & migration
- Secured and a repeatable way of migration that reduces migration errors.
- Integrated CI/CD pipeline for faster application release

Accelerated Assessment & Migration

- Automated assessment for identification of blockers for migration to Azure cloud services
- Automated refactoring of application source code to enable applications to run on Azure cloud service

50%
Reduction
in assessment and migration timelines

Scalable & Agile Applications

- Application replatforming to cloud native architecture to enable full utilization of cloud capabilities
- Integrated CI/CD pipeline for faster application release

25%
Increase
in development lifecycle & velocity of applications

Significant TCO Savings

- Eliminate high cost licensed commercial databases like Oracle, DB2 or Sybase by re-platforming to Postgres (Open source) or SQL server on Azure
- Eliminate high cost licensed commercial middlewares like Weblogic, Websphere by re-platforming to Azure app service
- Cost effective migration compared to manual methods

60%
TCO Savings
(approximate)

How Hexaware's Solution works, to achieve business benefits?

Extensive Automation for Quick Turnaround

- Extensive automation enables the assessment & migration of the application & database landscape upto 50% faster

Capabilities of AMAZE platform

- Re-platform commercial database to open source or Microsoft services on Azure
- Replatforming applications and middlewares using AKS or app service

24x7 Next Gen Cloud Ops

- Automated support for the Cloud landscape an automated platform, providing a single pane of control and visibility across service management, governance, monitoring, provisioning & orchestration

Eliminate high cost, high maintenance commercial database & middleware's using Hexaware's AMAZE platform

Our promise to you

- Our capability to replatform On prem commercial databases & middlewares to open sources will guarantee TCO benefits

An offer to get you started

- Complimentary solution Workshop to identify scope & approach to the cloud
- ROI based outcome to give a clear understanding of the TCO benefits

Indicative TCO benefits realized by customers with on-prem JAVA app running on WebLogic server & Oracle DB.

		DB TARGET →				
		Lift & Shift	SQL IaaS	Postgres IaaS	SQL PaaS	Postgres PaaS
APPLICATION TARGET ↓	IaaS	5-10%	15-20%	30-35%	35-40%	40-45%
	AKS	10-15%	20-25%	35-40%	35-40%	45-50%
	App Services	15-20%	25-30%	40-45%	45-50%	50-55%

Why Hexaware?

Hexaware is one of the fastest growing Indian IT services company due to its disruptive value proposition. Cloudify Everything is the part of Hexaware's core philosophy and Hexaware's enterprise cloud services help enterprises in realizing a digital future, all while optimizing IT, increasing agility, and reducing cost. Hexaware can help you reduce complexity and leverage cloud better, irrespective of your corporate landscape
