

# **KPN Modern Workplace Product Services Catalogue**

## 1.1 KPN Modern Workplace Azure Virtual Desktop

Within the service of KPN Modern Workplace Azure Virtual Desktop (WVD) is a complementary part. Azure Virtual Desktop is a Public Cloud-based Virtual Workplace environment. Azure Virtual Desktop is intended for a number of specific applications such as: access for suppliers and administrators, users from thin clients or mobile devices or for applications with specific needs (for example access to traditional file share). All applications can be offered as a full desktop or as a RemoteApp, depending on the need. Azure Virtual Desktop is easily scalable and quick to activate.

### 1.1.1 Azure Virtual Desktop 1-5 applicaties

With Azure Virtual Desktop 1-5 applications, KPN offers a virtual desktop based on Windows 10 Enterprise multi-session with up to 5 additional business applications. Azure Virtual Desktop 1-5 applications come standard with installation of Microsoft 365 apps for enterprise, Microsoft OneDrive for Business, Microsoft Teams client and Microsoft Edge according to Microsoft best practices for virtual environments.

If you need to make more than 5 applications available in your Azure Virtual Desktop, KPN will look at this use case with you and prepare a custom quote for this. Please contact your Account manager.

### 1.1.2 Azure Virtual Desktop Remote App

Azure Virtual Desktop Remote App allows you to virtually deliver 1 specific application to your end users. From an end user perspective, it looks like this application is installed locally (available in the start menu) on the device, but in reality, this application is running in Azure. For applications that have to run close to the back-end environment, Remote App offers a solution.
