

Customizing Microsoft Azure IoT Solution Accelerators

Extend a powerful and robust IoT solution to meet your specific asset management requirements.

User Interface Customization

With the help of our expert team, we can modify the user interface of any accelerator to add new pages, graphs, controls and other UI components. We can also help you customize the way these solutions display key data on built in dashboards.

Extend Powerful and Agile Micro Services

As the solution accelerators are based on Micro Services which are agile, scalable and reliable, customizing these services helps you scale the solution as per your needs.

Open and Flexible

Fully customizable and the source codes are all available at GitHub. Connect any type of devices and customize your deployments from the beginning.

Security and compliance

Built in security measures, enabling secure monitoring of assets to improve efficiencies, drive operational performance to enable innovation, and employ advanced data analytics to transform businesses.
